رپورٹ نظم و نسق سر رشته طبابت و صحت عامہ سرکار عالی بابتہ سنہ ۱۳۴۹ ف
مرتبہ نظامت طبابت و صحت عامہ سرکار عالی ملاحظہ ہوئی۔

تبصرہ ۵:—

۱۔ حسب سال گذشتہ سال زیر تنقید میں بھی نظامت طبابت و صحت عامہ
سرکار عالی کے فرائض ڈاکٹر حیدر علی خان صاحب یف آرسی یس انجام دیتے رہے۔

طبابت

۲۔ دوران سال زیر تنقید میں سب اسسٹنٹ سرجنوں کی تین جایا دیں
منظور ہوئیں چنانچہ ختم سال زیر تنقید میں اسٹاف حسب ذیل رہا:—

سیول سرجن (۴۱)

اسسٹنٹ سرجن (۷۹)

سب اسسٹنٹ سرجن (۲۰۶)

۳۔ حسب سال گذشتہ سال زیر تنقید میں بھی دواخانہ جات کی تعداد (۱۵۱) رہی۔ ان کے علاوہ قصبہ 'مورم ضلع عثمان آباد کے لئے ایک جدید دواخانہ کے قیام کی منظوری دی گئی لیکن سال زیر تنقید میں اس دواخانہ کا افتتاح نہیں ہوا۔

۴۔ مریضوں کے لئے یہ باعث اطمینان ہو گا کہ دواخانہ عثمانیہ میں اعزازی متخصصین ہستہ میں تین دن کام کرنے کے بجائے چھ دن کام کر رہے ہیں اگر ان کی رخصتوں کے زمانہ میں اجرائی کاریں دقیقیں پیش آتی ہیں تو میڈیکل افسروں کو خصوصی امراض کی تعلیم دلانے کی جانب توجہ کرنے کی ضرورت ہے۔

۵۔ جملہ دواخانہ جات کے اندرونی و بیرونی مرضاء کا مرجوعہ اوسط روزانہ بجائے (۲۶۱۹۹) سال گذشتہ کے سال زیر تنقید میں (۲۴۵۷۰) رہا حالانکہ سال گذشتہ مرجوعہ کے اوسط روزانہ میں معتد بہ اضافہ ہوا تھا۔ کمی کے وجود بیان کئے گئے ہیں وہ اطمینان بخش نہیں ہیں۔ آپریشنوں کی تعدادیں بھی (۴۹۲۰) کی کمی رہی اور تعداد اموات کے تناسب میں بھی اضافہ رہا۔ ہاں جملہ دواخانہ جات میں زچگیوں کی تعدادیں (۱۳۵۷) کا اضافہ ہوا۔

۶۔ تعمیر عمارات کی سرخی کے تحت وہی مواد پیش کیا گیا جو سال گذشتہ کی رپورٹ میں پیش ہوا تھا۔ یہ معلوم نہ ہو سکا کہ دوران سال زیر تنقید میں کتنے دواخانے تعمیر ہوئے۔

۷۔ - رپورٹ کے اعداد سے ظاہر ہے کہ ناظم صاحب نے ایک دن میں ایک سے زیادہ دواخانہ جات کا معائنہ کیا۔ ظاہر ہے کہ تفصیلی معائنہ کے لئے 'کم از کم ایک دو روز قیام کرنے کی ضرورت ہے تاکہ اضلاع کے دواخانوں پر سرسری نظر نہیں بلکہ گہری۔ اجمالی نہیں بلکہ تفصیلی نظر پڑ سکے اور معائنہ کنندہ پر عیب و صواب سب ظاہر ہو سکیں۔ اور مقامی مریضوں سے بھی دواخانہ کے اسٹاف کے برتاؤ کے متعلق بھی دریافت کیا جانا ضروری ہے تاکہ دوروں کے مریضوں پر ان شکایتوں کا بھی سدباب ہو سکے جو رعایاے اضلاع کو پیدا ہوتی رہتی ہیں۔

۸۔ سال زیر تنقید میں (۲۱۹۹) لاوارث اطفال کی رجسٹری کی گئی ہے۔ عملہ کے لحاظ سے یہ تعداد بہت قلیل ہے۔ مگر چونکہ رپورٹ میں بتایا گیا ہے کہ اب عملہ کو بڑی دیوڑھیوں میں کام کرنے کا موقع مل گیا ہے اس لئے توقع کی جاتی ہے کہ سال آئندہ رجسٹری کی تعداد میں معتد بہ اضافہ ہوگا۔

۹۔ فست ایڈ (First Aid) کی تعلیم سال گذشتہ (۱۲۰۶) طلباء کو دی گئی تھی لیکن اس سال صرف (۹۸۸) ہی طلباء تعلیم پاس کئے حالانکہ سال گذشتہ کے ریویو میں یہ نوٹ کیا گیا تھا کہ:—

”سیدول سرجنوں کو یہ ہدایت کرنی مناسب ہے کہ وہ اس جانب اپنی خاص توجہ مبذول کریں اور جہاں تک ممکن ہو سکے زیادہ طلباء کو تعلیم دیجائے۔“

کمی کے وجوہات رپورٹ زیر تنقید میں یہ بتلائے گئے ہیں کہ

۱۔ چند اضلاع میں مرض ہیضہ پھوٹ پڑنے کی وجہ سے جماعت قائم نہیں

کی جاسکی۔

۲۔ کافی تعداد میں جمعیت پولس نے حصہ نہیں لیا۔

۳۔ عوام اور مختلف مدرسوں کے طلباء، پچھلے سال کے مقابلے میں اس سال کافی تعداد میں شریک نہیں ہوئے۔

امید کہ سال آئندہ فست ایڈ (First Aid) کی تعلیم کی کافی اشاعت کر کے تعداد میں معتد بہ اضافہ کیا جائے گا اور پولس کو تعاون کی طرف توجہ دلائی جائیگی۔

۱۰۔ سال زیر تنقید کے ختم تک قانون ہڈیکل ريجسٹریشن کے تحت صرف (۲۹۶)

ڈاکٹروں کی رجسٹری کی گئی ہے مگر اس میں اس کی صراحت نہیں کی گئی کہ اس میں سرکاری ملازم ڈاکٹروں کی تعداد کتنی ہے اور خانگی طب کرنے والے ڈاکٹروں کی کتنی ہے۔ اس قانون کا نفاذ یکم خرداد ۱۳۸۸ء سے ہوا ہے۔ اس اٹھارہ ماہ کی مدت میں یہ ممکن العمل تھا کہ کم از کم سرکاری ڈاکٹروں کی رجسٹری ہو جاتی جس کے سررشتہ کے ملازم ڈاکٹروں کی تعداد صرف (۲۲۶) ہے۔ توقع کی جاتی ہے کہ سال آئندہ اس جانب خاص توجہ کی جائے گی اور رپورٹ اپنے مواد کے ساتھ مکمل ہوگی۔

۱۱۔ دوران سال زیر تنقید میں کتنے پوسٹ مارٹم ہوئے اس کی تعداد تک نہیں

بتلائی گئی ہے۔ جس کا اندراج ضروری ہے۔

۱۲۔ حکومت سرکار عالی میں دواخانہ عثمانیہ کے علاوہ وکٹوریہ زرنانہ ہسپتال اور

دواخانہ دارالمجانین خاص ادارے ہیں۔ اسی لحاظ سے اس کی ضرورت تھی کہ ان کے

کام کی تفصیل کی جاتی اور علاج معالجہ میں ان ادارہ جات کی بد و جہد کو

دکھلایا جاتا۔

۱۳ - رپورٹ زیر تنقید میں حصہ طبابت کا خلاصہ نہیں دیا گیا حالانکہ اس کے متعلق رپورٹ سال گذشتہ کے ریویو میں بھی متوجہ کیا گیا تھا۔

صحت عامہ

۱۴ - سرکار عالی یہ نوٹ کرتی ہے کہ پیدائش اور اموات کی رجسٹری اور صحیح طریقہ پر اعداد جمع اور شائع کرنے کی نسبت سررشتہ نے جو تجاویز پیش کئے ہیں ان کی نسبت سررشتہ مال کی رائے حاصل کی جارہی ہے۔

۱۵ - ناظم صاحب کی اس رائے سے سرکار عالی کو اتفاق ہے کہ غیر دیوانی علاقہ جات کے صحت عامہ کے انتظامات معیار سے بہت گرے ہوئے ہیں۔ جب تک ان علاقہ جات پر کافی دباؤ نہ ڈالا جائیگا جہاں غریب رعایا کی جانوں کی حفاظت میں لاپرواہی برتی جا رہی ہے امراض و بائی کی بیخ کنی تقریباً ناممکن ہے۔

۱۶ - سال زیر تنقید میں سررشتہ کو طاعون اور ہیضہ کے امراض سے سخت مقابلہ کرنا پڑا۔ یہ باعث اطمینان ہے کہ طاعون کے دو لاکھ (۱۹) ہزار (۳۹۵) ٹیکے اور ہیضہ کے تین لاکھ دس ہزار (۳۲) ٹیکے نکالے گئے۔

۱۷ - سرکار عالی اس کو اطمینان کی نظر سے دیکھتی ہے کہ سررشتہ نے چیچک کی ٹیکہ اندازی میں کافی ترقی کی جس کی یہ دلیل ہے کہ سال زیر تنقید میں (۵) لاکھ (۴۶) ہزار (۲۱۲) ابتدائی ٹیکے اور ایک لاکھ پندرہ ہزار (۶۰) مکرر چیچک کے ٹیکے نکالے گئے۔

۱۸ - یہ امر موجب اطمینان ہے کہ عارضی طور پر ایک پبلک سرج ہسپتال Plague Research Hospital لاہور میں کھولا گیا تاکہ Sulphahiazole کی

(Therapeutic value) کا امتحان کیا جائے اور اس کام میں بہدنی کی حکومت تعاون کر رہی ہے۔

۱۹۔ سرکاریہ نوٹ کرتی ہے کہ سال زیر تنقید میں شہر حیدر آباد میں Anti-Plague Campaign کا کام بہت کامیاب رہا جس کی وجہ سے طاعون میں شدت نہیں رہی۔

۲۰۔ سرکاریہ محسوس کرتی ہے کہ نظام ساگر پراجکٹ میں دافع مہریا کے تدابیر اختیار کرنے کی شدید ضرورت ہے۔

۲۱۔ سر مالکم واشن ڈائریکٹر اس انسٹیٹیوٹ لندن ڈاکٹر رائے کے ہمراہ جب حیدر آباد آئے تھے تو دیر یا ڈپارٹمنٹ کے نتیجہ خیز نتائج دیکھ کر یہ سچ متاثر ہوئے اور انہوں نے سررشتہ کو جو فنی امداد دی اور جو حسب ذیل ریمارک کے اُن کا سرکار عالی شکریہ ادا کرتی ہے۔

”یہ قابل تعریف اعداد و شمار دیر یا کو قابو میں لانے کی ایسی کامیابی کو ظاہر کرتے ہیں جس سے بڑھ کر کامیابی ”پناما“ (Panama) میں بھی نصیب نہیں ہوئی۔“

شہر حیدر آباد سے دیر یا کے کلیتہاً دور کرنے کی نسبت سر مالکم واشن نے جو سفارشات کی ہیں سرکار عالی اُن کی اہمیت کو سمجھتی ہوئی توقع کرتی ہے کہ متعلقہ سررشتہ جات اس میں تعاون کر کے اسکیم کو کامیاب بنانے میں کوشاں رہیں گے۔

۲۲۔ یہ امر قابل مسرت ہے کہ سررشتہ نے مرض یاز (Yaws) کو دفع کرنے کے لئے جو تدابیر اختیار کیں وہ بہت موثر اور فائدہ مند ثابت ہوئیں اور یہ کہ (۱۰۵۱۶) مریضوں کا علاج کسا گیا جس میں (۸۰) فیصدی کامیابی ہوئی۔

۲۳۔ ڈاکٹر فرموڈٹ ملر میو برکلو سس کمشنر انڈیا سال زیر تنقید میں دو مرتبہ حیدر آباد آئے اور دق کی اسکیم سے متعلق جس دلچسپی کا انہوں نے اظہار کیا اور جو رائے دی وہ قابل شکریہ ہے۔

۲۴۔ تجربہ کی غرض سے شہری اور دیہی رقبوں میں نیوٹریشن سروے سے متعلق سہ سالہ باقاعدہ پروگرام اس رپورٹ کا دلچسپ حصہ ہے۔ ان تجربات سے جو نتائج برآمد ہونگے ان کا گورنمنٹ نہایت دلچسپی سے مطالعہ کریگی۔

۲۵۔ سرکار مسرت کے ساتھ یہ نوٹ کرتی ہے کہ سک گزیڈ گان کے علاج کے لئے ممالک محروسہ میں سال زیر تبصرہ سے قبل صرف پانچ مراکز تھے۔ اور سال زیر تنقید میں ہر مستقر ضلع پر ایک ایک مرکز قائم کیا گیا۔

۲۶۔ اُن تمام عمدہ داروں کے نام جو ناظم صاحب نے سرکار عالی کی ہمدردانہ توجہ کے لئے پیش کئے ہیں ان کے فرائض کی انجام دہی پر سرکار عالی اپنی خوشنودی کا اظہار کرتی ہے فقط

MEDICAL AND PUBLIC HEALTH DEPARTMENT
H.E.H. THE NIZAM'S GOVERNMENT.

ADMINISTRATION REPORT FOR THE YEAR
1349 FASLI.

Part I.—Medical.

DIRECTION.

I continued as Director, Medical and Public Health Department throughout the year assisted on the Medical side by Dr. M. Hasan Ali Khan as the Deputy Director and on the Public Health side by Dr. M. Farooq. Mr. Syed Lutf Ahmed continued as my Personal Assistant and during his absence on privilege leave for two months and fourteen days Mr. Waheed Ahmed Khan, the Senior Superintendent officiated for him. Dr. M. Hasan Ali Khan also was on leave for two months from the 20th of Farwardi 1349 Fasli.

MEDICAL STAFF.

(a) *Civil Surgeons*:—There was no increase in the cadre of Civil Surgeons during the year, the number of permanent and temporary Civil Surgeons being the same as in 1348 Fasli, *e.g.*, 41.

(b) *Assistant Surgeons*:—The number of permanent Assistant Surgeons was also the same as in 1348 F., *e.g.*, 79. The two posts of Assistant Surgeons in the Plague and Malaria Departments continued to be temporary as before.

(c) *Sub-Assistant Surgeons*:—An increase of three Sub-Assistant Surgeons was sanctioned for the leave reserve cadre. The former number of Sub-Assistant Surgeons was 203 and the sanction of the three during the year under report brought up the cadre of Sub-Assistant Surgeons to 206. In the Plague and Malaria Departments 3 and 2 Sub-Assistant Surgeons respectively continued to be temporary as before.

(d) *Honorary Appointments*:—Four honorary posts of specialists namely, one in the ear, nose and throat section, one in skin and venereal diseases, one in diseases of the eye and one in dentistry continued as in the previous year at the Osmania Hospital. These specialists now attend the hospital on six days a week instead of three days as in the previous years.

Two honorary posts are sanctioned for the Sultan Bazaars Hospital, but one of these remained vacant for the lack of a suitable mulki applicant.

Post-Graduate Training outside Hyderabad:—The deputation of an officer for post-graduate work abroad had to be postponed for the present owing to the outbreak of war.

Post-Graduate Training at the Osmania Hospital:—As usual nine Pro-assistant Surgeons were posted to the Osmania Hospital and two more Pro-assistant Surgeons to the Victoria Zenana Hospital soon after qualification from the Medical College for their post-graduate training. Experience has proved that students freshly qualified would not be as useful as when sent out into the districts as after they have undergone a year's post-graduate training in the city hospitals and then sent to various taluq dispensaries and district hospitals in the subordinate service. With the idea of refreshing the knowledge of medical men who have worked for long years in the districts, medical officers are brought from time to time to the Osmania or the Victoria Zenana Hospitals for refresher courses. This brings them in touch with the latest methods of diagnosis and treatment.

Training Classes:—As in the past years classes for training of Nurses and Compounders were held at the Osmania Hospital. Midwives and Dais are trained at the Victoria Zenana Hospital and in addition to this when women are available for Compounders training they are also trained there. Vaccinators are sent for training to the Government Vaccine Depot. The period of training for dais has now been extended to two years instead of one as in previous years. Ward boys undergo a course of training in First Aid and Elementary Hygiene and after the completion of their course are examined under the rules of the Hyderabad Ambulance Board by Civil Surgeons.

Male Nurses:—A scheme for training of men as Nurses having been sanctioned as an experimental measure for three years is of great help as this removes the present difficulty of finding the required number of mulki women Nurses and also helps greatly in the work of male wards in the hospital. The department has accordingly recommended to Government for a permanent Male Nursing Institution and this was under consideration of Government when the year closed.

Leprosy Training:—As all the medical officers in the leave reserve cadre had to be occupied in relieving those deputed for training in various branches and also in leave arrangements it was not possible to arrange for training in the post-graduate course of leprosy at the Dichpalli Centre. It is however intended to do this as soon as the present difficulty of leave reserve is overcome.

D. P. H. Training:—On the recommendation of the Department Government was pleased to sanction the deputation of Civil Surgeons and other specialists for special qualifications needed for their respective posts. These gentlemen are deputed to various centres of training either in India or abroad on their full pay in Osmania currency while the deputation lasts for one year in addition to giving them a lumpsum of O.S. Rs. 1,000 to cover their tuition fee and expenses for the to and fro journey. This period of one year includes the period of deputation combined with the privilege leave each officer has earned during his service.

During this year Dr. P. Somasunderam, Civil Surgeon, Hyderabad and Dr. S. K. Jattar, Civil Surgeon, Aurangabad were accordingly deputed to the Calcutta University for the D.P.H. course.

Among the Assistant Surgeons Doctors Abdur Rub and Hasnuddin Khan, both M.B.'s of the Osmania University, obtained the D.P.H. of Calcutta University also.

At present two more medical officers Doctors Ghiasuddin and Ghousuddin are also deputed to Calcutta for the same course.

Hospitals and Dispensaries:—The number of permanent hospitals and dispensaries remained as before and

are 151 in number. The mental hospital had to be transferred from the Central Jail, Hyderabad to the old Reformatory buildings at Jalna.

During the year under report a new village type dispensary has been sanctioned for Murram in the Osmanabad district for which the Local Fund Committee has agreed to provide funds. Arrangements were in progress for the opening of this dispensary when the year under report closed.

Medical Statistics:—The total attendance of new patients treated at all the hospitals and dispensaries of the Dominions during the year was 3,097,490 against 3,260,652 in the previous year. The fall in number has been explained by various districts as due to the following reasons:—

1. Anti-malaria campaign has reduced the incidence of the disease to a great extent in some districts.
2. Evacuations of villages, taluq and district headquarters during severe epidemics of cholera and plague in some districts have led to a fall in the number of patients.
3. Migration of people from famine stricken areas has also contributed to the fall in number.

In-patients:—The number of new in-patients was 44,400 compared with 45,106 last year, showing a decrease of 706, and the daily average was 1,940 as against 2,703 last year.

Beds:—2,835 beds were available for institutional treatment of patients.

Outpatients:—The number of new outpatients was 3,053,090 against 3,215,546 recorded last year resulting in a decrease of 162,456. The daily average attendance was 22,630 against 23,496 in 1348 Fasli.

Surgical Operations:—Surgical operations performed in all the medical institutions during the year numbered 120,265 against 125,185 last year. Of these 10,939 were Major and 109,326 minor, as compared with 11,356 and 113,829 respectively in 1348 Fasli. The percentage of mortality of patients treated at the different institutions in the Dominions was noted to be 0.21 as against 0.20 in 1348 Fasli.

Medical Aid to Women:—The full cadre of Women Medical Officers of the department consists of one Superintendent and 4 Civil Surgeons, all working at the Victoria Zenana Hospital, one Woman Medical Officer in charge of Child Welfare Work, 13 Assistant Surgeons and 26 Sub-Assistant Surgeons. 3 Women Sub-Assistant Surgeons who were provided for by the Judicial and Police Department continued to work under the Children's Protection Scheme at Hyderabad.

Beds:—1,133 beds were available for women in-patients against 1,096 in the preceding year.

Women Patients Treated:—During the year 20,692 women including female children received treatment as indoor patients against 20,310 treated last year. The total number of women outpatients including female children was 1,085,593 compared to 1,132,468 in 1348 Fasli.

Maternity Work:—5,918 Maternity cases were attended to in various hospitals and dispensaries as against 4,561 in the previous year. Of these 5,042 cases were of normal labour and 876 of abnormal labour. 1,874 additional labour cases (including abnormal) were conducted outside the hospitals.

Buildings:—Government was pleased to sanction eleven lakhs for medical buildings during the triennium commencing 1347 Fasli and permitted the department to utilise the savings of the last triennium as well, which amounted to Rs. 82,698. It was however stipulated that the buildings of the T. B. Sanatorium and the Mental Hospital should also be constructed out of this grant and the balance spent on other buildings. As this sum proved to be insufficient for the special buildings and also for the usual hospital buildings it was submitted to Government that an additional grant would be required to complete the building programme.

On this a further sum of Rs. 22,59,460 over and above the eleven lakhs was sanctioned to enable the department to remove the congestion in some of the overcrowded medical institutions and to also facilitate the construction of some special medical institutions. A programme of the proposed medical buildings has been chalked out by

the Medical Department including the following special buildings and it has been sent up to the Public Works Department for the preparation of plans and estimates:—

	Rs.
1. Construction of new paying wards at the Osmania Hospital costing about	1,20,000
2. Construction of an up to date Radium Institute, costing about	2,00,000
3. Construction of a new Zenana Hospital, costing about ..	12,00,000
4. Construction of a new Mental Hospital, costing about ..	5,00,000
5. Construction of a new Nurses Hostel, costing about ..	3,20,000
6. Construction of a T. B. Sanatorium (12,59,238)	4,00,000
Total ..	<hr/> 27,40,000 <hr/>

Plans and estimates for these buildings with the exception of the T. B. Sanatorium were still with the Public Works Department when the year closed.

The total sum provided for the construction of the T. B. Sanatorium amounts to Rs. 12,59,238. Of this Rs. 4,00,000 have been provided from the Medical Building Grant, Rs. 3,00,000 from H.E.H. the Nizam's Silver Jubilee Fund and Rs. 5,59,238 as the local share from the State contribution to Her Excellency Lady Linlithgow Fund. Plans and estimates amounting to Rs. 12,50,000 have been sanctioned by Government for the construction of a T. B. Sanatorium during the year and the Public Works Department has been asked to start the construction.

After providing for special buildings, etc., out of the Government grant totalling Rs. 34,42,158 the balance of Rs. 7,02,158 has been earmarked for the construction, additions and alterations of Medical institutions in the City and districts.

Works costing Rs. 12,12,560 were sanctioned from the Building Grant during the triennium 1347-1349 Fasli and referred to the Public Works Department for construction. This includes Rs. 4,00,000 for the T. B. Sanatorium and Rs. 5,00,000 for the construction of a Mental Hospital.

*Inspections:—*During the year 12 headquarter hospitals 44 taluq dispensaries and the Leprosy Hospital at Dichpalli were inspected. Inspections of the City Hospital and dispensaries were made of and on as occasion demanded in addition to visits to the Osmania and Victoria Zenana Hospitals at regular intervals. Visits to the Ananthagiri Hills had to be made three times in connection with the construction of the T. B. Sanatorium. Mention may be made of attendance at the Plague Preventive Conference at Bangalore where I had to go on Government deputation. In all 41 days were spent in camp during the year under report.

Dr. M. Hasan Ali Khan, Deputy Director of the Medical Section inspected four district headquarter hospitals and 9 taluq dispensaries during the year and spent 24 days in camp. The Civil Surgeons inspected all the dispensaries in their jurisdiction once during the year in addition to their tours on Public Health duties.

COLONEL JOHN LAW ENDOWMENT FUND.

(Statement No. VII-A.).

Rs. 1,636-14-9 stood to the credit of the Osmania Hospital in the Imperial Bank of India at the close of 1348 Fasli. This together with the dividend received from the fund during 1349 Fasli amounted to Rs. 5,387-7-1 from which Rs. 2,803-12-8 were spent on additional comforts of patients such as artificial limbs, fruits, patent medicines, etc. At the close of the year the balance to the credit of the Osmania Hospital was Rs. 2,583-10-5.

From the share of the fund, the Victoria Zenana Hospital had to its credit Rs. 523-12-0 at the close of 1348 Fasli. Rs. 1,875-4-2 were credited to this hospital from the dividend of the John Law Fund during 1349 Fasli. Of this Rs. 1,693-7-2 were spent during the year on additional comforts for patients leaving a balance of Rs. 705-9-0.

SULTAN-UL-HUKMA FUND.

(Statement No. VII-B).

There was a balance of Rs. 744-10-0 to the credit of the Osmania Hospital at the Imperial Bank of India. Rs. 375-0-0 were received as the annual dividend during 1349 Fasli. Rs. 20 p.m. were sent to the dispensary at Narayanpet and Rs. 10 p.m. to the District Hospital, Raichur from Azur to Shehrewar 1349 F. to be spent on diet, milk, etc., for indigent persons as sanctioned by the Trustees. This together with the money order commission amounted to Rs. 303-12-0 leaving a balance of Rs. 815-14-0 at the close of the year.

Medical Supplies.

Medicines, surgical instruments and appliances were supplied to all the State hospitals and dispensaries, Jail Dispensaries, some Mission Hospitals and Paigah and Jagir dispensaries in the Dominions.

During the year about 600 annual indents and about 200 extra indents were supplied.

Medicines, instruments, appliances and other hospital requisites, such as furniture, bedding, clothing, etc., were ordered from the following firms as approved by the Board of Survey:—

<i>Drugs & Sundries:—</i>	Messrs. Bengal Chemical and Pharmaceutical Works, Calcutta.
<i>Surgical Instruments:—</i>	Messrs. Powell & Co. Ltd., Bombay.
<i>Sera & Vaccines:—</i>	Bengal Immunity, Co., Calcutta.
<i>Dressings:—</i>	Co-operative General Stores, Hyderabad-Deccan.
<i>Bedding & Clothing:—</i>	Messrs. Kasety Shankarya, Secunderabad.
<i>Wooden Furniture:—</i>	Messrs. Shaikh Ibrahim, Hyderabad-Deccan.
<i>Aseptic Furniture:—</i>	Messrs. Alibhoy Valliji & Sons, Multan.
<i>Refilling of Oxygen Cylinders:—</i>	Messrs. K. Chapman & Co., Bombay.

Quinine sulphus worth about Rs. 25,000 was purchased during the year, from the Madras Penitentiary, as the approved firm could not arrange the supply owing to the present European War.

Budget:—The amount sanctioned during the year for the purchase of European medicines, instruments, hospital necessities, etc., was Rs. 2,19,064-0-0 as shown below:—

		Rs.		
European Medicines	..	1,64,714	0	0
Hospital Necessaries	..	35,000	0	0
Surgical Instruments	..	18,000	0	0
Country Medicines	..	700	0	0
Gauze and Bandage	..	650	0	0
		<hr/>		
Total	..	2,19,064	0	0
		<hr/>		

Bills:—Bills to the extent of Rs. 1,84,367-14-10 were paid during the year to the various firms. Value of the bills pending adjustment at the close of the year was about Rs. 2,713-2-10. On account of the War the Bengal Chemical and Pharmaceutical Works were unable to supply several drugs. A list of these drugs was sent to Government for arranging supply through the Hyderabad Residency, but as no decision had been arrived at in the year under review, the department consequently had to lose the amount of Rs. 31,478-7-9 earmarked for the purpose.

THE CHILDREN'S PROTECTION SCHEME.

It is three years since this scheme has been in force in Hyderabad. Assistant Surgeon Dr. Riasath Ali Khan was in charge of the scheme under the guidance of the Director, Medical and Public Health Department in his capacity of the District Officer.

The scheme is limited at present to the City of Hyderabad, and the work remained divided in three sections as before, each section being under an Inspector and Inspectress, assisted by one male and one female constable.

The public of Hyderabad, who, in the beginning were not in a position to understand the real object of this scheme have now, as a result of the most patient and tactful discharge of duties on the part of the section officers have realised the benefit of the scheme and are co-operating with it.

As the preliminary work of the scheme has been completed, the staff is now in a position to have access to the big devdies in the City where it may be expected to find a vast number of registerable children.

During the year under report 2,199 children were registered under this scheme and 9 of these children were reclaimed by their parents.

HYDERABAD CENTRAL AMBULANCE BOARD.

Classes for training in ambulance work were held in all the District Headquarters Hospitals numbering 15 and one in Hyderabad, representing 988 candidates in all. Of these 546 passed the examination successfully and 433 certificates were issued during the year 1349 Fasli by the Hyderabad Central Ambulance Board. The remaining 113 certificates were issued after the close of the year as they were not ready in time for issue to the candidates.

Classes were held for college and high school students, Police Constables, employees of Excise Department, H.C.S. students, Ward Boys, Compounders, mill hands, Inspectors and Sub-Inspectors of the Municipal Corporation, Hyderabad. There is now a branch centre working at the headquarters of each district under the aegis of the Hyderabad Central Ambulance Board.

During the year under report 988 candidates were instructed in First Aid against 1206 in the previous year, thus showing a fall of 218 in comparison with the preceding year. The reasons for the fall in number have been given by the different centres as due to—

1. Outbreaks of cholera, owing to which classes were discontinued in some districts.
2. Police Constables did not join these classes in sufficient numbers.

3. The public and students from different schools also did not join in as great numbers as in the previous year.

The following are the names of the educational institutions where first aid lectures were delivered during the year under report:—

1. Police Training School, Hyderabad.
2. Mahboobia Girls School, Hyderabad.
3. Government High School, Nander, Raichur, Hanamkunda, Bidar, Mahboobnagar and Narayanpet.
4. Forest Training School at Mahboobabad.
5. The Boys Normal School, Hanamkonda and Aurangabad and the Middle Schools at Asifabad, Jintoor, Sangareddy, Jogipet, Girls Middle School, Gulbarga.

Income and Expenditure:—At the beginning of the year the balance at the Bank remaining from last year was 878-2-4. The annual grants received from Government amounted to Rs. 2,025, and subscriptions collected from various Branch Centres amounted to Rs. 686-1-11 totalling Rs. 3,589-4-3.

The expenditure incurred from the Hyderabad Central Ambulance Board together with the amount spent from the District Branch Centres totalled Rs. 2,269-4-3, this being spent in the fees of examiners and allowances of the clerks.

MEDICAL REGISTRATION.

For the purpose of the Hyderabad Medical Registration Act No. 1 of 1348 Fasli a Hyderabad State Medical Council was established for H.E.H. the Nizam's Dominions which consists of the following nine members including the President and the Vice-President:—

1. Dr. H. Hyder Ali Khan, F.R.C.S.E., Director, Medical and Public Health Department, Ex Officio President, (Chairman).
2. Dr. Brij Mohan Lal, B.A., M.B., B.S., M.Sc. (London), Principal Osmania Medical College, (Ex Officio Member).

3. Major K. N. Waghray, M.R.C.P. (London), Elected by the Medical Faculty of the Osmania University.
4. Dr. S. W. Hardikar, M.D., M.R.C.P.E., Elected by the Medical Faculty of the Osmania University.
5. Dr. S. A. Jabbar, M.B., B.S., D.M.R.E. (Cambridge), Representing the Hyderabad Medical Association.
6. Dr. Md. Munawar Ali, F.R.C.S.E., Elected by the Registered Medical Practitioners.
7. Dr. Bankat Chander, M.R.C.P. (London), Elected by the Registered Medical Practitioners.
8. Dr. S. B. Surti, F.R.C.S.I., Nominated by H.E. the President, H.E.H. the Nizam's Executive Council.
9. Mr. Syed Lutf Ahmed, Nominated by H.E. the President, H.E.H. the Nizam's Executive Council.

Mr. S. M. I. Razvi, B.A. (Hons.), Alig. continued to act as Registrar.

In all 296 medical practitioners were registered till the end of 1349 Fasli. The accumulated income of the Medical Council from registration fee and the sale of books, etc., amounted to H.S. Rs. 3,953-9-8 and B.G. Re. 1-0-6.

THE OSMANIA HOSPITAL.

I continued as Superintendent of the Osmania Hospital during the year.

Accommodation:—The sanctioned accommodation is for 400 in-patients only whereas the daily average was 790.32, the highest figure reached during the year being 835 on the 24th of Aban 1349 Fasli. A few destitute patients and lepers were sent to the Baith-ul-Mazureen, the Home for the Disabled at Secunderabad where accommodation is very limited. There is a great need in the City of Hyderabad for an infirmary where chronic invalids could be housed and looked after on humanitarian principles.

Nurses for whom no accommodation is yet provided continued to occupy two wards in the Osmania Hospital which could be utilised for keeping in-patients. The construction of additional quarters for nurses is a very urgent need which demands immediate attention of Government.

Owing to the increase in the number of patients at the Osmania and Victoria Zenana Hospitals there is a great strain imposed on the medical, nursing and the menial staffs. Proposals for additional staff and increase of funds are pending Government consideration. It is with the greatest difficulty that the routine work is being carried on at these institutions owing to want of adequate staff and funds.

Her Highness the Princess of Berar was pleased to perform the opening ceremony of the remodelled out-patient department at the Osmania Hospital during the year under report.

Hyderabad Nursing Service:—Rev. Mother M. Sapientia continued as Lady Superintendent of the Hyderabad Nursing Service. His Exalted Highness was graciously pleased to grant a year's extension in her service. At the Hyderabad Nursing School 24 probationers were admitted during the year for training. The following is the detailed statement of results of the April and September 1940 examinations:—

	APRIL 1940		SEPTEMBER 1940	
	Appeared	Passed	Appeared	Passed
Previous ..	9	9	4	4
1st Year ..	8	8	3	3
2nd Year ..	10	7	7	4
3rd Year (Final in Sick Nursing) ..	7	5	6	6
Midwifery	4	3

4 Probationer Male Nurses previously recruited continued the training during the year. Further recruitment of Male Nurses could not be made during the year as the recommendation of the department was still under consideration of Government when the year ended.

The nursing staff worked efficiently in the face of great strain imposed by the large attendance of patients and had it not been for the services of unpaid probationers the work could not have been carried out to any satisfactory degree.

SUMMARY.

PART II.

PUBLIC HEALTH.

Population.—The mid-year estimated population for 1349 F. was 16,302,307. A 'Key Map' (plate 1) of the Dominions is attached to this Annual Report showing area, mid-year estimated population, density of population and the number of taluqs and villages in each District.

Birth and Death Rates.—We have often repeated that our records are very inaccurate and that they only give wrong or at best very vague impressions. The Deputy Director of Public Health was specially deputed to study the Centralized System of Collecting and Compiling Vital Statistics in Mysore and Madras Presidency. This system has been strongly recommended by the Central Advisory Board of Health meeting held in 1939 for adoption. A detail scheme has been submitted to Government for sanction.

HISTORY OF CHIEF DISEASES.

General.—Attacks and deaths due to infectious diseases are more or less accurately returned from the Government 'Illaqas' but the same cannot be said of Non-Government areas which do not possess a Public Health personnel worth the name and do not welcome any suggestion or advice given by the Government Public Health Department. The general level of sanitary administration in these 'Illaqas' is lamentably low. Unless Government brings pressure to bear on all those who neglect their responsibility in protecting the life of ryots, there is very little hope of satisfactorily combating epidemic diseases in these Dominions.

99,853 deaths were reported due to 'Fevers.' There has been a fall of 10 per cent. compared with last year. This is due to the proper allocation of deaths under other causes as a result of the efforts that are being made by the Public Health Staff including village death registers. Plate '2' shows the number of deaths caused by various

diseases. Returns from the Police Department are used but their figures do not tally with the returns sent by District Health Officers. This disparity will disappear under the new Centralized Scheme suggested to Government.

Important changes were introduced during the year as far as the collection of epidemic figures are concerned. A correct ledger of Epidemic Diseases is now maintained in the Head Office. The Police Department has been asked to return deaths classified under the various 'Age groups' and a proper classification of the causes of deaths has also been recommended.

Small-pox.—1899 deaths were reported of which 1017 were from Non-Government 'Illaqas' and 750 from the Municipal area in Hyderabad City. 661,972 vaccinations were performed. This is the highest figure of vaccinations performed during any one year. Great stress is laid on revaccinations which numbered 115,760. This figure is again the maximum on record.

Plague.—7,715 deaths were registered of which 1,683 belonged to Non-Government areas. 219,395 inoculations were performed. Osmanabad, Gulbarga, Mahbubnagar, Atraf-i-Balda and Bhir were infected with plague throughout the year.

Latur Plague Hospital.—Arrangements have been made to open a temporary plague Research Hospital to test the therapeutic value of "Sulphathiozal," which has given promising results in a small number of cases treated by Colonel Sokhey, I.M.S., of Bombay.

Plague Department, Hyderabad City.—1349 Fasli marks another year of successful anti-plague campaign. 14 cases and 10 deaths occurred in the City and only one Frontier Village was infected with 2 cases. Infection was introduced in the City by a family coming from an infected area in Lohara Paigah. 40,000 plague inoculations were performed. 45,000 houses were fumigated and $4\frac{1}{2}$ lakhs of rat holes were closed. Over five lakhs of rats were caught alive. Every day's catch was dissected in the Plague Laboratory to detect infection. 21 were found infected. Four scientific papers were published by the Staff of the Plague Department. The cost per head of population on anti-plague measures was $4\frac{1}{2}$ annas.

Dr. S. Raghavender Rao, Assistant Plague Officer was admitted by the Calcutta University to the Degree of Doctor of Science.

Cholera.—Of the 11,183 deaths reported 1,466 were from Non-Government areas. 310,032 inoculations were performed. The Assistant Bacteriologist was deputed to Kasauli for learning the technique of large scale production of cholera vaccine and from next year cholera vaccine will be manufactured in the Government Laboratories for use throughout the Dominions.

Malaria.—The need for anti-malarial measures in Nizamsagar Ayacut is pressing. Anti-malarial measures were carried out for 6 months in the three heavily infected taluqs of Hingoli, Kalamnuri and Jintur of the Parbhani district with good results. 20,483 malarial patients received a complete course of treatment.

Malaria Department, Hyderabad City.—Sir Malcolm Watson, Director of Ross Institute, London and Dr. Ramsay, Principal of Ross Institute, Calcutta, paid a visit to Hyderabad and were very much impressed by the results achieved by the Malaria Department. Comparing the splenic index figures for Hyderabad for 1930 and 1939 Sir Malcolm observed that,

“ These are remarkable figures and indicate a success in the control of malaria that was hardly exceeded by the work at Panama itself.”

He made his special recommendations as detailed in para. (11) of the report.

The cost per head of population on anti-malarial measures was Re. 0-1-11.

Dr. Sabari, Malaria Officer and Dr. Badruddin, Assistant Health Officer of Parbhani were deputed during the year for training at the Malaria Institute at New Delhi and on the recommendation of Sir Malcolm Watson, Dr. Mohd. Farooq, Deputy Director of Public Health and the Malaria Officer visited Malabar, Wynaad, to study the naturalistic methods of controlling malaria.

A proposal has been sent up to Government to appoint a full-time Entomologist in the Malaria Department and to depute 3 Pro-Health Inspectors to Ross Institute Centres in India for training in Malaria Survey work.

Leprosy.—695 lepers were admitted to the Dichpalli Hospital 2,936 patients were treated in the 59 outpatient leper clinics near their homes. Dr. Issac Santra, Propaganda Officer of the British Empire Leprosy Relief Association visited Hyderabad and during his stay of 2 months, visited 57 villages in Osmanabad, Bidar, Gulberga and Raichur districts and the outdoor clinics in Mahbubnagar, Medak, Atraf-i-Balda and Secunderabad and the Leprosy Hospital at Dichpalli. He found 635 cases of leprosy in an aggregate population of 60,084 in the villages surveyed giving an incidence of one per cent. but it varied from 0 to 8 per cent. in different quarters of a village.

Yaws.—A second intensive campaign was organized for six months consisting of six units. Seven taluqs in Warangal, seven in Asifabad, four in Karimnagar and one in Mahbubnagar district were visited by the inoculating parties. 548 villages were reported to be affected in which 10,516 cases were treated with 80 per cent. cure. The cost per patient treated was Rs. 1-11-0. Thiosarminine was used throughout for injection. For a complete eradication of the disease, the campaign should be continued for some years to come.

Tuberculosis.—6,659 new cases received treatment in the Tuberculosis Clinic at Dabirpura. Adult muslim females constitute a large majority of the total attendance. A number of clinics are required for Hyderabad City and this is the responsibility of the Municipal Corporation.

832 in-patients were treated in the Tuberculosis Hospital and the Osmania Hospital.

Dr. Frimodt Moller paid two visits to Hyderabad and his expert advice was taken on the tuberculosis schemes.

Lord Nuffield generously presented two Iron Lungs to the Department for use.

Numerous examples which suggest the association of bad housing and tuberculosis could be cited from investigations carried out in other countries. Prevention of the disease cannot be achieved so long as housing conditions remain unhygienic and overcrowded. The City Improvement Board have done laudable work by clearing slums and reconstructing healthy dwellings. Building

bye-laws recommended by this department are now enforced in all towns with a population of over 5,000.

Medical Inspection of Schools.—Girls and Boys in 19 High Schools, 77 Middle Schools and 24 Primary Schools in the districts and in 29 Boys and 11 Girls Schools in the City were medically examined.

Milk feeding experiments concluded during the year proved the benefits derived from the addition of whole-milk, skim milk or calcium Lactate to the normal diet of scholars, the addition of whole-milk being most efficacious.

Health of Jails.—The average daily jail population of the District and Central Jails was 3,022 against an authorized accommodation of 4,964. The general sanitary condition of jails and the health of prisoners remained good during the year. The death-rate in jails for the Dominion was 14.5 per mille.

Health Education.—The Department carried out an incessant health propaganda by all the means at its disposal. The cinema car toured for 112 days and visited 79 villages. The doctor in-charge gave 102 lectures. The Artist prepared several posters. 30,000 illustrated leaflets on epidemic diseases in local languages have been added and distributed in rural areas.

Maternity and Child Welfare Service.—A Woman Medical Officer of the rank of Civil Surgeon was employed for organizing Maternity and Child Welfare work in the Dominions in Dai 1349 Fasli. The duties of this Officer were mainly associated with propaganda work which included talks and lectures to mothers, lectures on mother-craft to school girls and guides and preparation of pamphlets and posters. Efforts at establishing work in Child Welfare and Maternity are in the embryological stage of development.

PUBLIC HEALTH SCHEMES.

I. The following schemes for improving public health were sanctioned by Government during the year:—

1. Second Grade Health Inspectors' Scheme of providing two extra Health Inspectors in each district.

2. Establishment of a Health Inspectors' Class in Hyderabad.
3. Anti-malaria scheme for the three taluqs of Hingoli, Kalamnuri and Jintur in the Parbhani district.
4. Scheme for the manufacture of cholera vaccine at the Government Laboratories.
5. The post of a whole-time Woman Medical Officer in-charge of Maternity and Child Welfare Services.
6. Rules and Regulations for the Hyderabad State Tuberculosis Association.
7. Intensive campaign against Yaws for six months in-charge of six medical officers.
8. Creation of a post of Artist in the Special Plague Department for preparing posters, etc.
9. Anti-malaria schemes for Utnoor and Narayanpet have been extended for 2 years.

II. The undermentioned new proposals were made to Government in 1349 Fasli:—

1. Establishment of four Rural Sanitation Units for the improvement of sanitary conditions in villages selected under the Rural Reconstruction Scheme.
2. Establishment of a Centralized Bureau of Vital Statistics in the Office of Director of Public Health.
3. Modified sanitation scheme for the 28 Frontier Villages surrounding the Secunderabad Cantonment for unified public health control.
4. Appointment of an Entomologist in the Malaria Department.
5. Deputation of three Pro-Health Inspectors to three Ross Institute Centres for training in Malaria Survey work.
6. Clerical Staff for Woman Medical Officer in-charge of Maternity and Child Welfare.
7. Anti-malaria schemes for Nirmal, Boath, Kinwat and Sirpur.

8. Provision of a temporary Plague Hospital at Latur for the trial of "Sulphathiozal" on plague

III. The Draft Acts given below which were referred back by Government were greatly revised and brought up to date and resubmitted to Government for sanction.

(a) Vaccination Act.

(b)' Registration of Births and Deaths Act.

(c) Infectious Diseases Act.

Sanitary Inspections.—The Deputy Director of Public Health was on tour for 25 days in rural areas for inspection and visited 42 villages, 6 district and 15 taluq headquarter towns.

Rural Reconstruction.—The district health staff have reported all round improvement in the selected villages where rural uplift work was in progress. 3,584 patients were treated for various ailments and 3,504 anti-plague, 1,582 anti-cholera and 3,863 vaccinations were performed. 942 drinking water wells were disinfected periodically.

Fairs and Festivals.—95 Major and 468 Minor festivals were held. The attention of the Water Board has been drawn to the necessity of providing protected water-supplies at important festival centres, in particular the perennial pilgrim centres where people keep coming throughout the year. 116 Uruses and Jatras were held without the permission of the Public Health Department. Attention of the Revenue Department has been drawn to this irregularity from time to time. Three major festivals were responsible for the wide-spread cholera infection in the Canal Zone of Nizamsagar. Six palkies passed through the Dominions for Pandharpur. 24,290 cholera inoculations were performed amongst the pilgrims.

Nutrition Department.—A programme of work covering three years' Nutritional Survey in urban and rural areas has been drawn up. The Sub-Assistant Surgeon appointed under the scheme was deputed to Coonoor for training.

Diet surveys of 112 families in Hyderabad City have been carried out. Dietetic habits of groups of people in

different rural areas of Medak district have also been investigated. Magic lantern lectures on "Food and Nutrition" were given in 11 villages and at one Mission Institution.

Anti-rabic treatment.—2,066 dog bite cases were treated at a cost of Rs. 3,470, of which 1,942 were in Hyderabad City. The attention of the Municipal Corporation has been drawn to take steps against stray dogs because the number of dog bite cases in the City are on the increase and it is wrong in principle to provide treatment without tackling the source of the disease.

Public Health Finance.—Total expenditure on Public Health works to 7.7 pies per head of population which is low. The Council Sub-Committees appointed to consider a note on the financial aspect of Public Health in the Dominions resolved that there was full reason for an additional increase on Public Health expenditure in rural areas. No material improvement in health conditions can be expected unless the cost is raised to at least about two annas per head of population. It is therefore imperative that Government should adopt a more generous policy with regard to expenditure on all measures calculated to improve the health conditions.

During the year, the department recommended to Government a revised Public Health Budget raising the annual expenditure in the districts to Rs. 10,29,085 which works to 1½ annas per head of population.

Vaccination against Small-pox.—546,212 primary vaccinations and 115,760 revaccinations were performed. These numbers are the highest on record so far. Each Vaccinator employed by the Health Department performed 3,315 vaccinations against 2,752 last year. The cost of vaccination per child vaccinated was 0-2-11.

Vaccine Depot.—582,469 doses of lymph were manufactured against 488,732 last year and 636,610 doses were distributed against 446,899 in 1348 Fasli. Rs. 5,940-8-0 were realized on sale of lymph to Non-Government Departments.

Chemical and Bacteriological Laboratory.—7,342 cases were investigated of which medico-legal examinations numbered 637. The latter included 337 cases for

the detection of poison, 210 cases for the examination of human blood stains, 21 for cattle poisoning, 68 for seminal stains, and 1 for abortion.

The most commonly used poisons were opium, datura, arsenic, alcohol, copper sulphate and Iodine.

Ganer remains the most commonly used cattle poison and was found in 8 out of 14 cases.

Three hundred and thirty-six water analyses and 590 food analyses were made. Of 437 samples of butter and ghee 139 were found to be adulterated.

Four hundred and thirty-four pathological specimens were examined on payment from private persons.

PART II.

PUBLIC HEALTH.

1. *Introduction.*—A 'Key Map' of H.E.H. the Nizam's Dominions showing the adjoining districts in British India is attached to this year's annual report to make the report more comprehensible. In each district, its area, mid-year estimated population, density of population and number of taluqs and villages are noted. Non-Government Illaqs (Sarf-i-Khas, Paigahs, Samasthans and Jagirs) are coloured green in the map, which together constitute 41.7 per cent. of the total area of the State and for purpose of public health administration, are not under the control of this Department. There are about 22,500 villages in the State of which 6,000 villages are situated in Non-Government Illaqs.

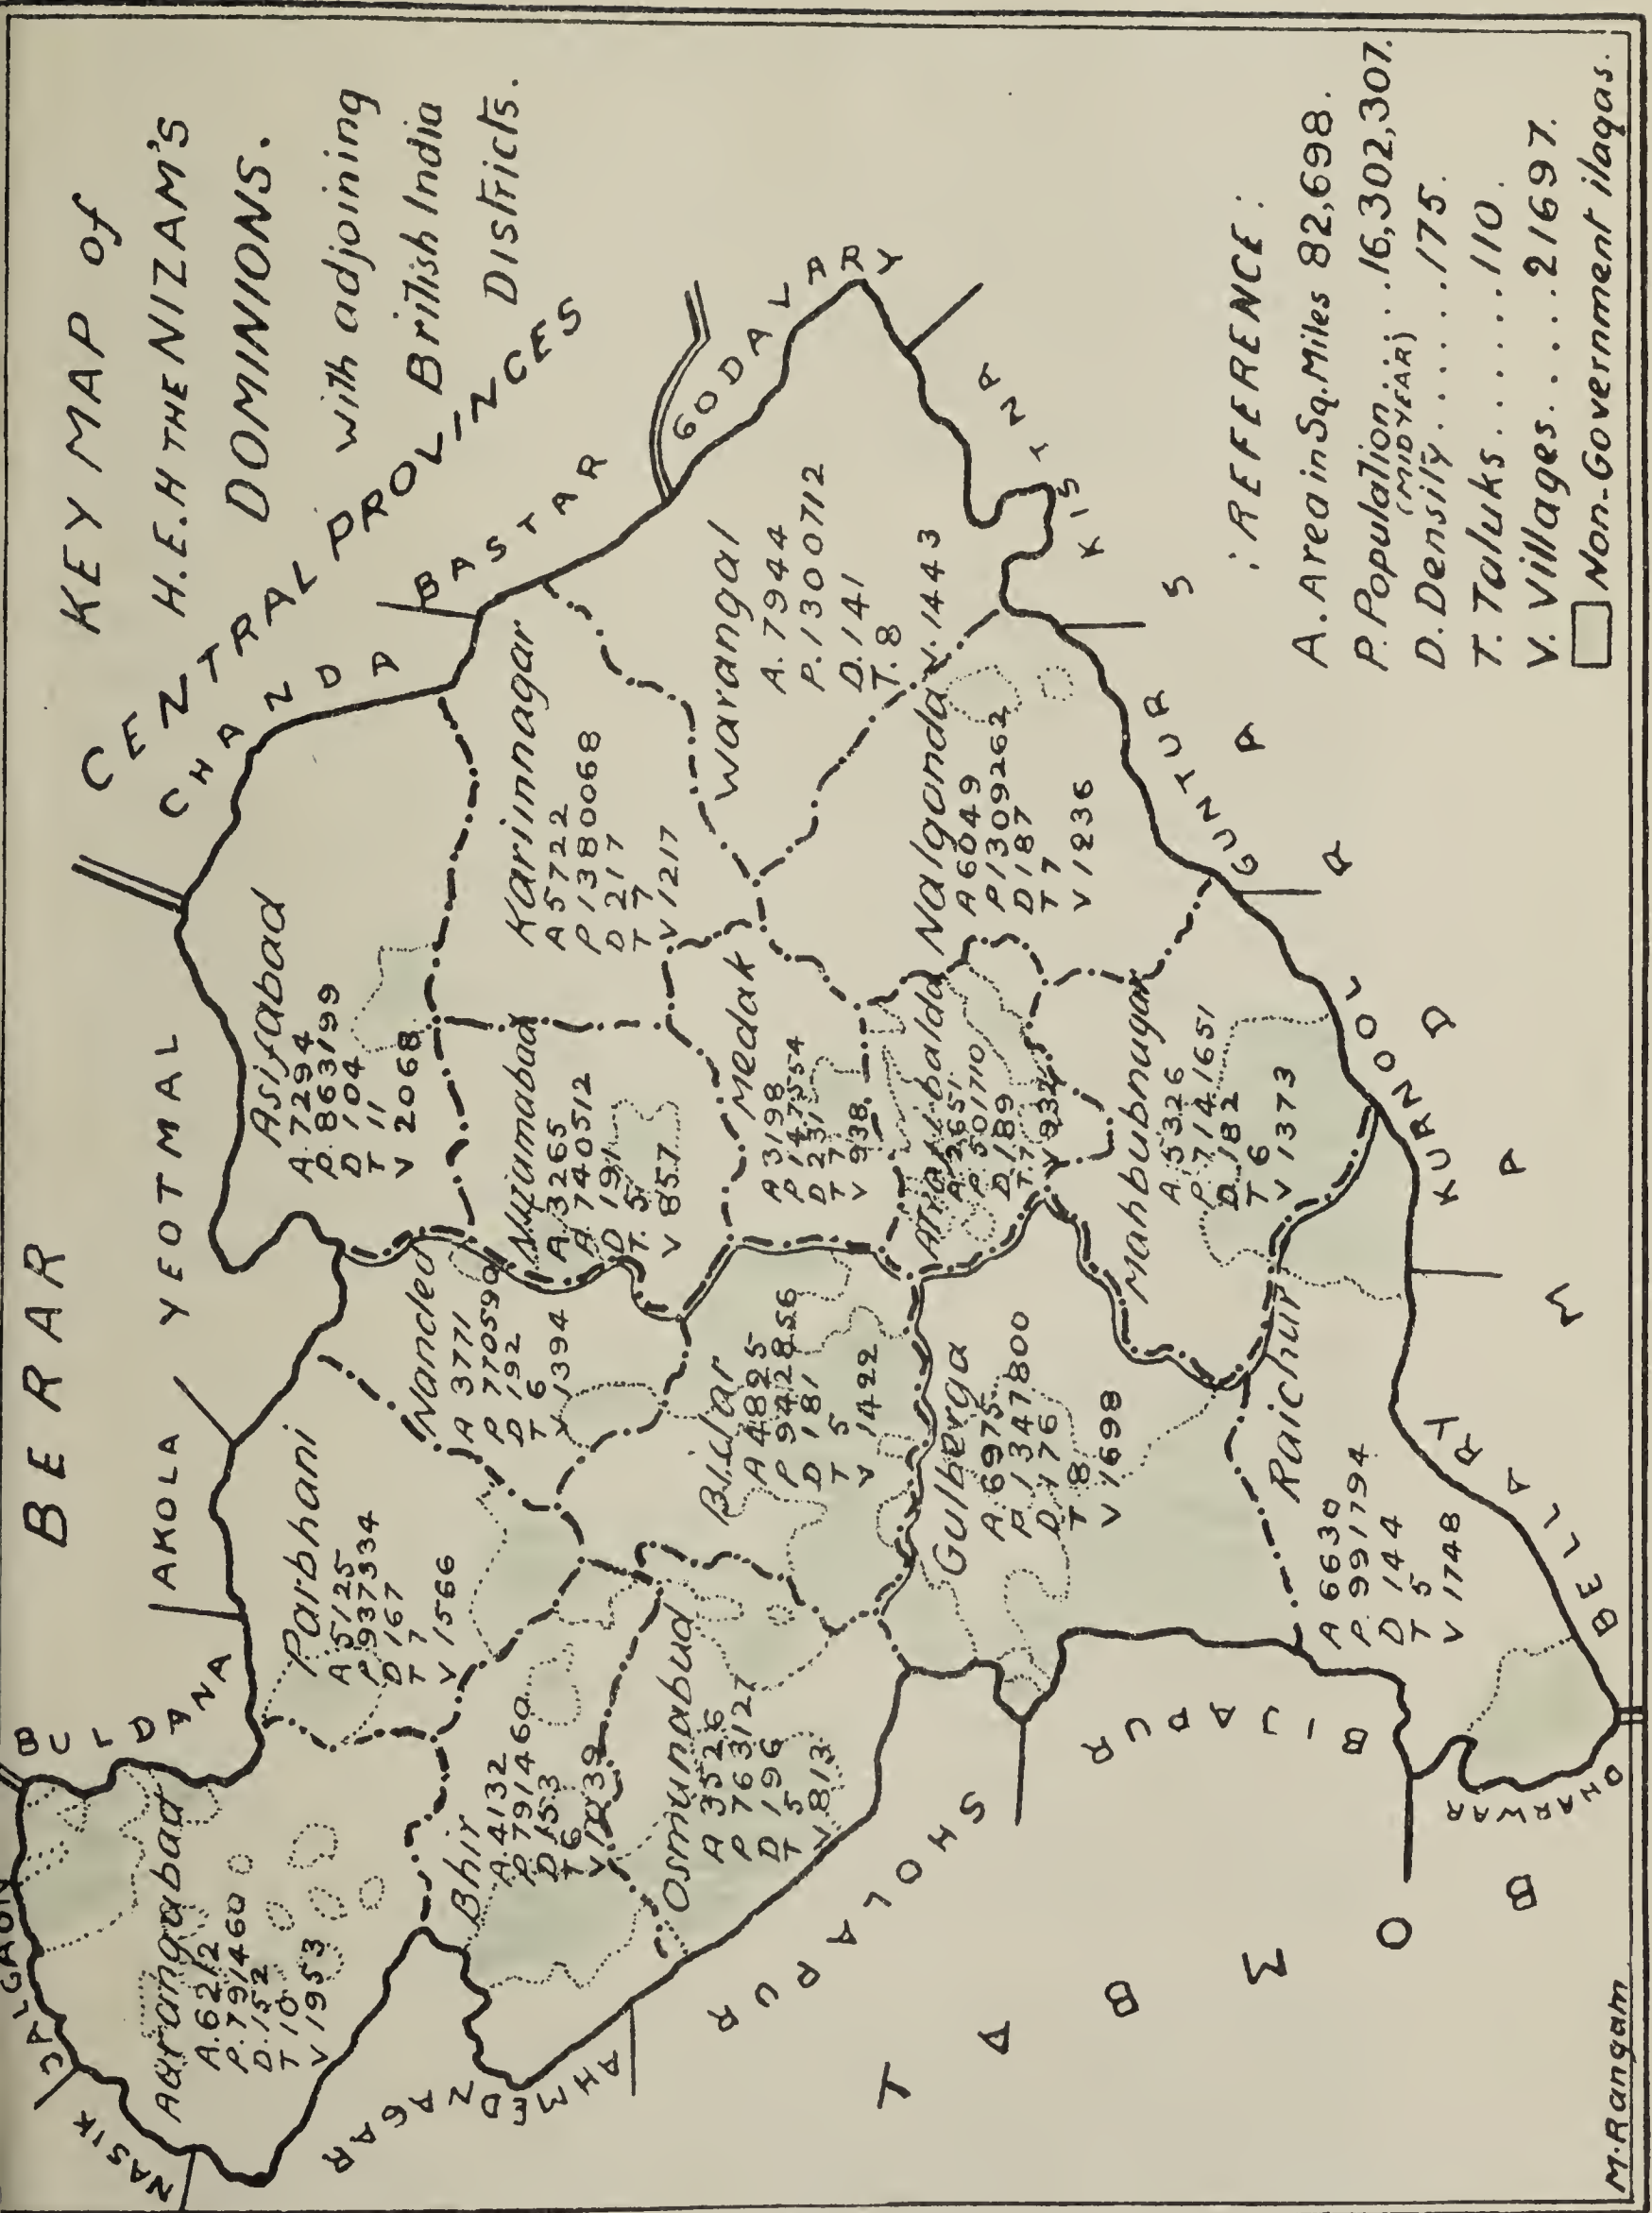

2. *Population.*—The Mid-year estimated population for 1349 Fasli was 16,302,307. Roughly 12 per cent. of the population lives in urban and 88 per cent. in rural areas.

3. *Area and Density of Population.*—(a) *Area:*—Excluding the territory of Berar, the Dominion occupies 82,698 sq. miles; of this, Secunderabad, Bolarum and Aurangabad Cantonments cover 22.53 sq. miles with a population of 1,28,383.

(b) *Dispersion of the Population*—The average density of population over the whole of Dominions is 175 to the sq. mile, the mean density of India being 195. Nearly 29 per cent. of the urban residents live in the Capital City of Hyderabad.

The total number of houses in the Hyderabad State is 3,312,222. This gives 40 houses to the sq. mile and 4 persons to a house.

4. *Birth and Death Rates.*—We need hardly emphasize the importance of assembling and analysing statistics concerned with the physical well-being of communities, attention to the value and scope of these

records without which the Public Health work must prove wasteful, expensive and ineffective has been drawn by Public Health workers at all times. We have often repeated that our records are inaccurate and that they only give wrong or at best vague impressions. Unless the system concerned with the collection and compilation of the raw material of Vital Statistics can ensure that the assembled individual facts are reasonably accurate, all attempts at valuation and evaluation become a mere waste of time.

Government in their review on last year's Public Health Report promised to give due consideration to any scheme that may be submitted by the Department to improve these records. In this connection, the Deputy Director of Public Health was specially deputed to study the centralized system of collecting and compiling vital statistics in Mysore and Madras Presidency. The adoption of centralized system by all Provincial and State Public Health Departments now in vogue in Madras and Mysore was strongly recommended by the Central Advisory Board of Health meeting held in the year 1939. A detail scheme on those lines has been submitted to Government during the year of report. In this scheme attention was drawn to the simultaneous introduction of:—

1. An Act for the compulsory notification and registration of births and deaths covering all urban and rural areas in the Dominions.
2. A system of collection by the respective Tahsildars of the monthly returns from all villages under his jurisdiction and their submission direct to the office of the Director of Public Health for compilation.
3. The establishment of a central Bureau of Vital Statistics under a trained Statistician in the office of the Director of Public Health.

The scheme for the establishment of Central Bureau is estimated to cost Rs. 17,500 recurring and Rs. 5,000 non-recurring. Unless all these 3 proposals are accepted and given effect to by Government, there is very little hope for the improvement of this important branch of Public Health work.

In the absence of correct returns whatever figures are available are given below which only demonstrate how inaccurate these figures are and how very pressing the need is for a radical change in the present system of collecting these events if they are to be of any statistical value. A reference to statement No. 15 P.H. will show that the birth and death rates in the various districts are shown to vary considerably. The birth rate varying anywhere from 7.1 to 14.7 and the death rate from 6.3 to 15.4 giving the average birth rate of 9.5 and death rate of 10. Beyond doubt these are gross underestimates.

Infantile and maternal mortality rates are not available at all except for the City of Hyderabad where a death rate of 178 per thousand live births is reported among infants under one year of age and 28.4 deaths among mothers for thousand births.

HISTORY OF CHIEF DISEASES.

5. *General.*—Infectious diseases have exhibited at all times a tendency to wax and wane. Periods of high incidence are followed by periods of comparative quiescence and these in their turn, again give place to increased prevalence. Factors responsible for the flaring up of epidemic diseases are (1) a large susceptible population (2) increase in the virulence of the infective agent and (3) conditions favourable for the transmission of infection. So little is known of the conditions under which pathogenic organisms undergo enhancement or attenuation of virulence that practical preventive measures are mainly directed towards (1) increasing the power of resistance of the population and (2) guarding the population from exposure to infection.

The first object is achieved by the production of artificial immunity which is now one of the chief weapons that the science of bacteriology has placed in our hands in the continuous campaign against disease; but as regards protection of the community from exposure to infection, this includes measures which may collectively be labelled as “environmental hygiene.” The latter is the strongest line of defence for the community and are much more effective than those concerned with artificial protection. “From the point of view of the community, therefore, it is necessary to concentrate on introducing those permanent changes which will make it possible for

the people to lead healthy lives. Whilst vaccines and sera, drugs and other treatments all have their place in the fight against disease, they are no substitute for pure water, fresh air, sanitary dwellings, and abundant and wholesome food. These are the foundations on which alone the superstructure of individual and communal health can be built."

Attacks and deaths due to infectious diseases in the Dominions are more or less accurately returned from the Government Illaqa, but the same cannot be said of the Non-Government areas. Reports from the latter are either not sent at all or are received so late and are so inaccurate that they are hardly of any value. The Non-Government Illaqa neither possess a Public Health personnel worth the name nor do they welcome any suggestion or advice given by the Public Health Department. Instances where advice given by the Public Health Department has been resented by Jagirdars and considered an interference with their rights are not uncommon. The general level of the health administration in these Illaqa as pointed out last year is lamentably low in respect even of the primary necessities of community life. Unless Government brings pressure to bear on all those who neglect their responsibility in protecting the life of ryots who are committed to their care and removes obstacle from the performance of the legitimate duties of the Public Health Department, there is very little hope of even satisfactorily combating epidemic diseases in the Dominions which after all do not respect artificial boundaries created by Government and Non-Government Illaqa.

Statement No. 17 P.H. gives the number of deaths from chief diseases and the mortality rate per mille of population in the various districts during the year of report.

99,853 deaths have been reported as due to 'Fevers,' *i.e.*, 60 per cent. of the recorded deaths during the year, the corresponding figures for the previous year were 101,011, *i.e.*, 70 per cent. of total deaths recorded that year. Thus it will be noticed that there has been an apparent fall of 10 per cent. in deaths due to that omnibus group described under 'Fevers.' This fall should be attributed mainly to the proper allocation of deaths under other causes as a result of the efforts that are

being made by the Public Health Staff in checking village death registers. The 60 per cent. of deaths due to 'fevers' no doubt, include a majority of deaths due to 'Malaria' and a fair number due to such preventable diseases as 'Tuberculosis' and 'Enteric' fevers.

Illustration No. 2 shows, in a comparative form, the number of deaths caused by the important group of diseases in relation to the average figures for the last decennium. In the making of these diagrams, returns from the Police Department are used but, as has been pointed out, year after year in the annual reports, these figures do not at all tally with the returns sent by the District Health Officers. The disparity between these two figures inspite of the many efforts made by the Public Health Department still continues. This difference is mainly due to the compiling of the figures by two different agencies in the district. This disparity shall disappear under the new Centralized Scheme suggested to Government to which reference has been made above.

Three important changes were introduced during the year as far as the collection of epidemic figures are concerned:—

1. Each weekly return from the district now gives corrected figures for the previous two weeks so that all late reports which previously went to swell the figures for the week under report are now allocated to their respective weeks of occurrence.

This procedure enables the maintenance of a correct ledger of epidemic diseases, week by week, in the Head Office. Corrected weekly figures were not available in previous years and were therefore of not much epidemiological value.

2. The Police Department has been requested to return deaths classified under the various 'Age Groups' and a proper classification of the causes of deaths has been recommended and it is hoped that when this form is introduced in the villages, actual number of deaths due to such diseases as Malaria, Tuberculosis, Snake-bites, Rabies, and accidents will also be available which will give us further valuable information.

	MORTALITY below 0.1 & Free

3. In the deaths mentioned under each of the major epidemic diseases, figures are given under two different heads of Government and Non-Government Illaqas. The figures for the Government Illaqas for these diseases may be taken as more or less accurate but from Non-Government Illaqas the figures due to the reasons mentioned above, are gross underestimates.

Graphs showing the relative intensity of plague, cholera and small-pox in each district of the Dominions during the year 1349 Fasli and the average of decade 1339 to 1348 F. (1930-1939 A.D.) are attached to this report in the respective sections. The district figures for the current year includes deaths in Non-Government Illaqas as well and are partly, therefore, responsible for the higher mortalities recorded in some of the districts during the year.

6. *Small-pox*.—There have been 1,899 deaths due to small-pox in the State of which 1,017 are reported from Non-Government Illaqas and as many as 750 from the Municipal area of Hyderabad City. Except for the last 3 months of the year, small-pox was prevalent in Hyderabad throughout the year and infection spread to a number of districts from the City. The unsatisfactory work of the Vaccination Staff under the Municipal Corporation has been, during the previous years, brought to the notice of the Corporation and Government and it is no wonder that the havoc played this year was a result of inadequate vaccination in the past giving rise to a large susceptible population.

In the districts, Parbhani, Atrah-i-Balda, Mahboobnagar, Aurangabad and Nalgonda recorded over 100 deaths each, whereas in Gulburga, Bhir, Warangal and Nizamabad the number of deaths varied between 20 and 5 only.

The total number of vaccinations performed during the year throughout the Dominions was 661,972. This is the highest number of vaccinations performed during any one year so far. Greater stress, during the year, was also laid on revaccinations with the result that 115,760 revaccinations were performed against 12,207 in the previous year. This year's figures for revaccination is again the maximum figure on record.

7. *Plague.*—(a) *Districts:*—There have been 7,715 deaths due to plague in the district of which 1,683 were reported from Non-Government illaqa. In five districts, viz., Osmanabad, Gulbarga, Mahboobnagar, Atrai-balda and Bhir plague was present throughout the year and it cannot be too often repeated that these are the districts in which several islands of Non-Government illaqa are situated some of which have become endemic centres of plague to which special reference was made in the administration report for 1348 Fasli.

Aurangabad, Nanded, Nizamabad and the four districts of Warangal Subha and Bagath remained entirely free from plague throughout the year of report.

219,395 inoculations were performed in the districts during the year against 160,373 in 1348 F. and 89,042 in 1347 F.

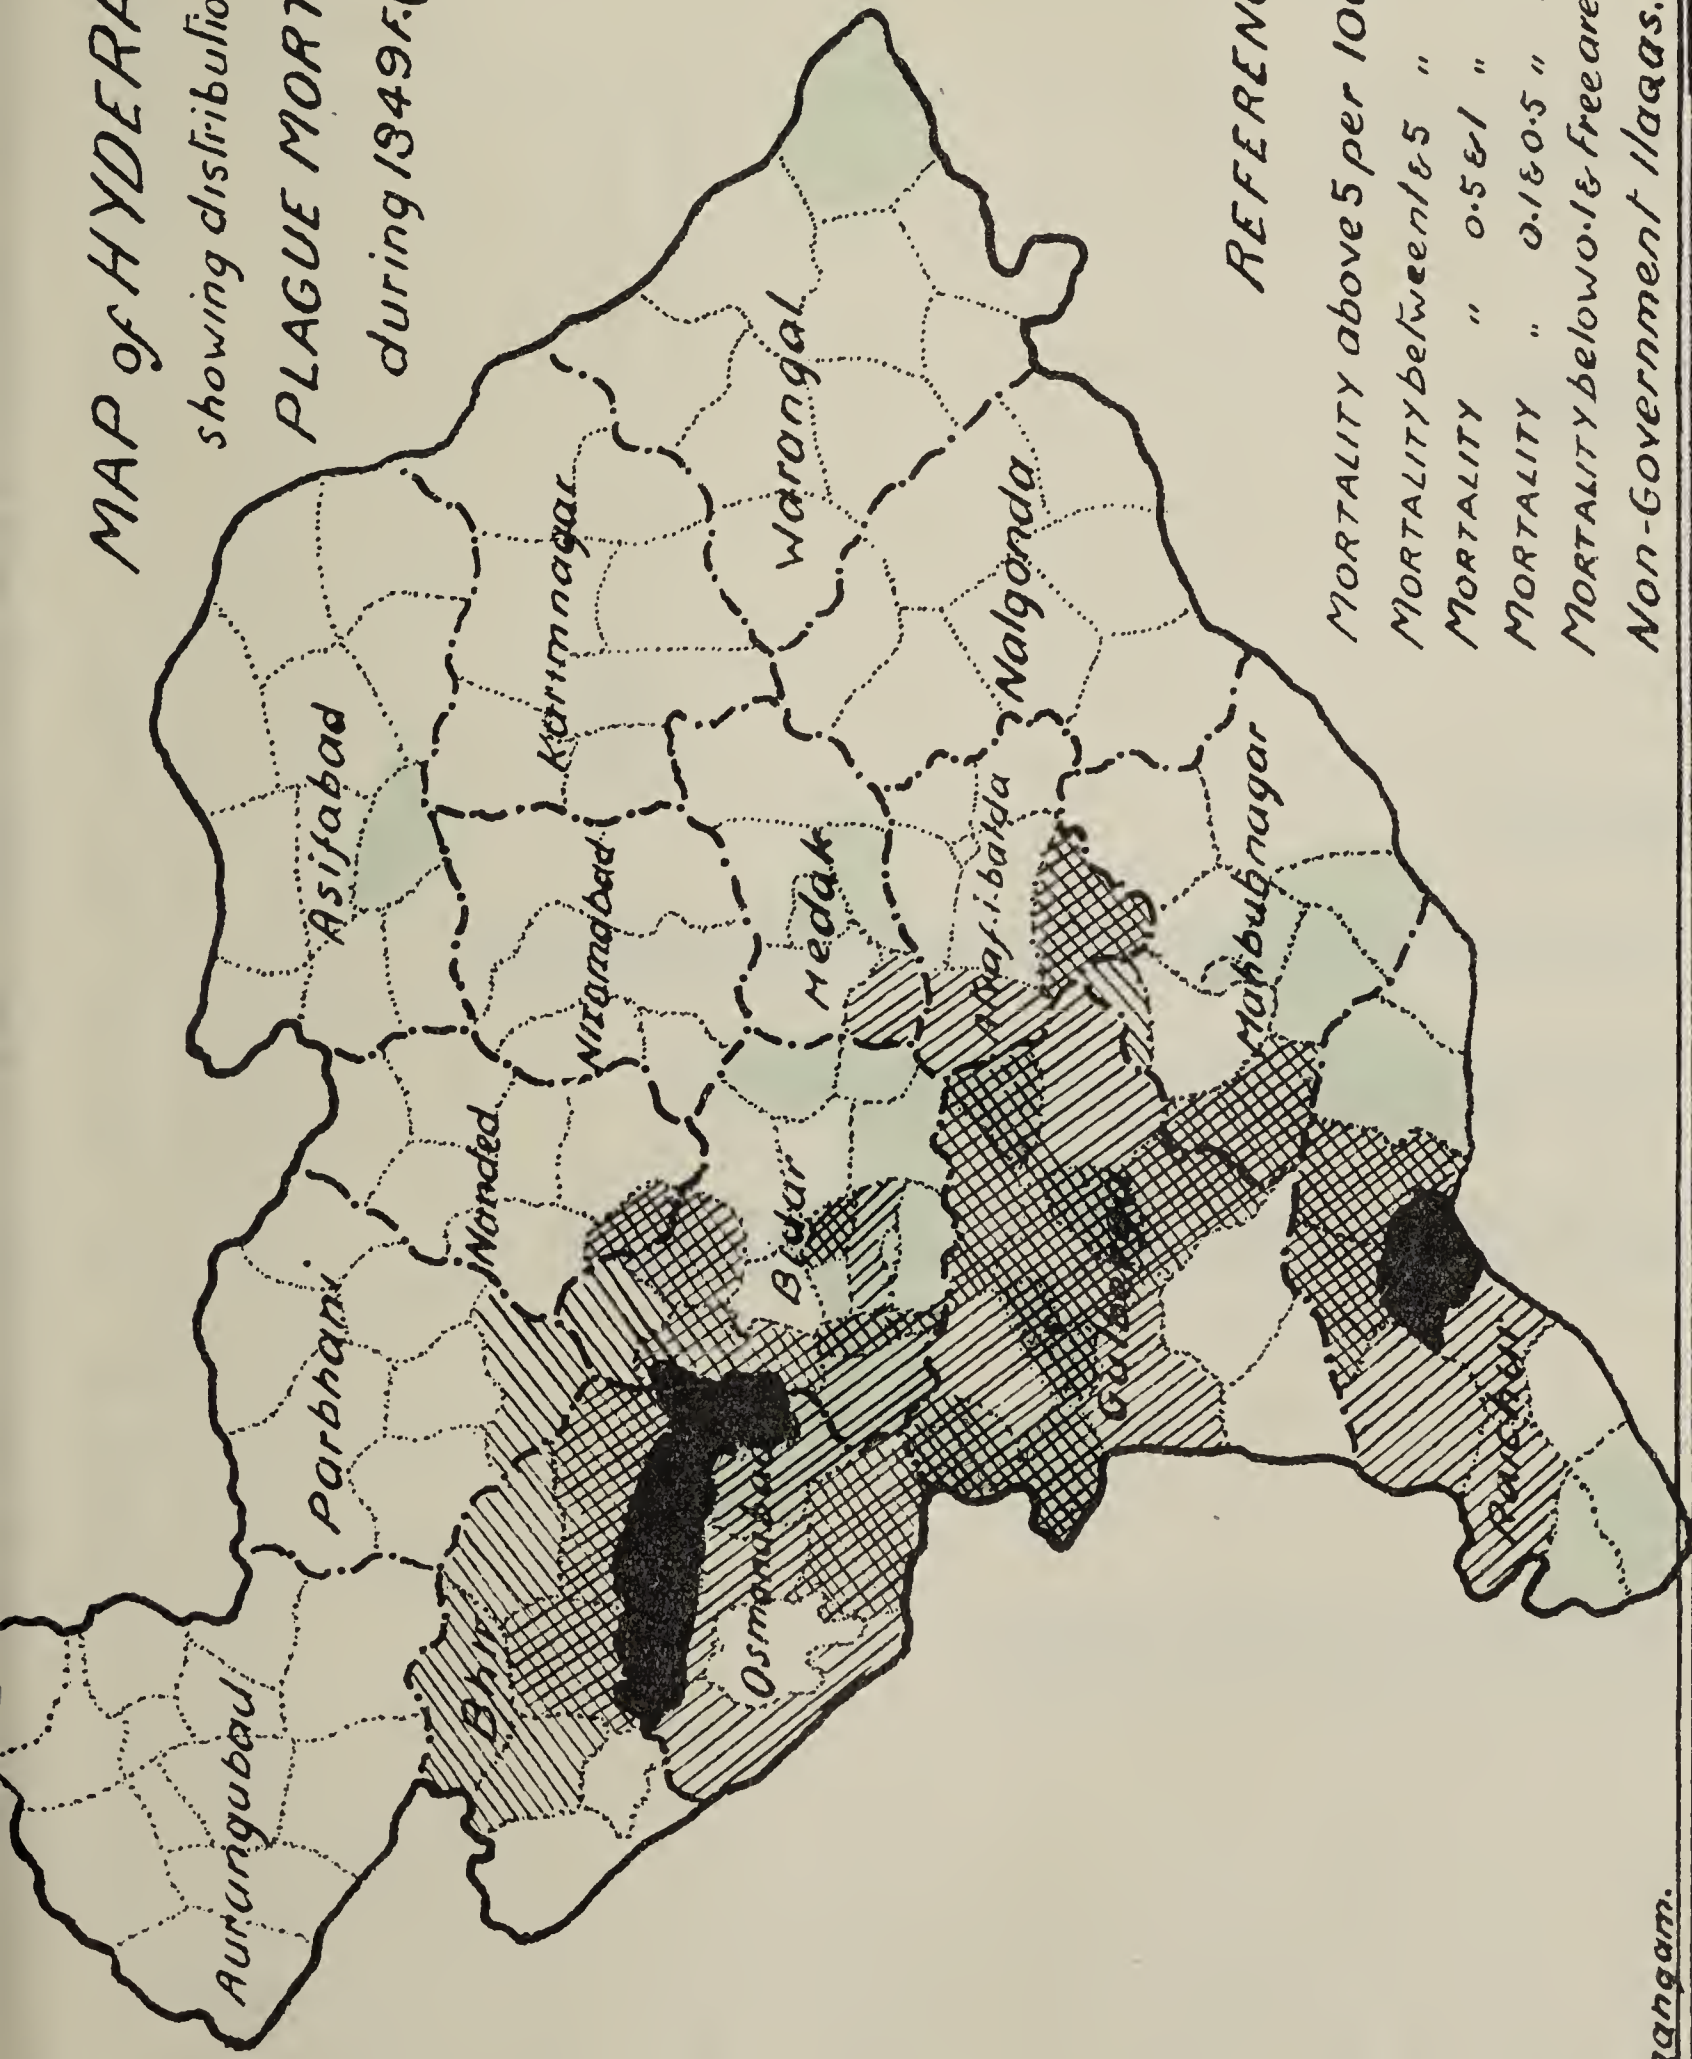

(b) *Latur Plague Hospital:*—Arrangements have been made to open a temporary plague hospital at Latur to test the therapeutic value of “Sulphathiozal”—a drug which has given promising results in a small number of plague cases treated by Colonel S. S. Sokhey, Director of Haffkine Institute, Parel, Bombay. The discovery of this drug for the treatment of plague cases is offering great possibilities but before the value of the drug is scientifically accepted as proved, it must be tested on a much larger number of cases. To be able to test the value of the drug adequately with proper bacteriological control it is necessary that plague cases should be treated in a hospital where facilities exist for carrying out extensive bacteriological tests and of observing the cases closely. The Public Health Department with the financial aid of the Local Fund Department have therefore undertaken to provide such a temporary hospital with necessary equipment, and to depute a Resident Medical Officer and a Compounder, some menial personnel and to feed and maintain the patients generally while the trials are carried out. The Director of Haffkine Institute, Bombay, has undertaken to send a complete unit of Staff to treat cases and to make the necessary laboratory tests. Latur has been selected as it is situated close to the endemic plague areas in Osmanabad District and where plague has broken out again this year.

DISTRICT OF THE HYDERABAD STATE DURING THE YEAR 1349 F. (1940 A.D)

AND THE AVERAGE OF THE DECADE 1339-1348 F. (1930 - 1939 A.D.)

(c) *Plague Department, Hyderabad City*:—1349 Fasli marks another year of successful anti-plague campaign in the City and Frontier Villages by the Special Plague Department of Hyderabad City. Fourteen cases and ten deaths of plague occurred in the City and only one frontier village out of 216 was infected with only two cases of plague. Infection was introduced in the City in the second month of the year by a family coming from an infected area in Lohara—Paigah of Nawab Lutf-ud-Dowla Bahadur. This is another instance of infection introduced into Hyderabad City from an uncontrolled area of Non-Government 'Illaqā.' In the previous year too, the introduction of infection in the City was ultimately traced to Tandur Jagir of Nawab Mehdi Jung Bahadur.

The spread of infection from infected area to non-infected locality has always been due to people who fled in panic with their belongings carrying infected fleas to non-infected areas. The Plague Department is taking vigorous steps to prevent this unwise and dangerous migration by persuasion and advice and in a few isolated instances, action has to be taken under the Plague Rules.

Over 40,000 anti-plague inoculations were performed in the City and the frontier villages during the year. Nearly 600 persons were accommodated in Health Camps.

Calcid fumigation was carried out in all the localities and has proved to be the most efficient method of rat and flea destruction. In the latter part of the year, however, 'Calcid' had to be replaced by 'Cyanogas Dust' as the former was no longer available in the market.

Over 45,000 houses were fumigated and 4½ lakhs of rat holes were closed during the year.

Rat trapping and baiting was continued as usual. Over 5 lakhs of rodents were caught alive. Every day's catch was dissected in the Plague Laboratory to detect infection. Of the total number of rats dissected, 21 were found infected with plague and prompt action was taken in the localities from which these infected rats were recovered.

The total expenditure on the City Plague Department and the Frontier Villages during the year was Rs. 1,27,472-2-4½ giving an average expenditure of four and a half annas per head of population on anti-plague measures in the controlled area.

The following papers were published by the staff of the Department:—

1. Role of 'Calcid' fumigation as a raticidal and pullicidal measure in anti-plague campaign—by Dr. C. L. Ahluwalia, Special Plague Officer, Hyderabad Deccan.
2. Epidemiological studies on plague in H.E.H. the Nizam's Dominions—by Dr. S. Raghvender Rao, Assistant Plague Officer.
3. Plague in Bengal—by Dr. S. Raghvender Rao, Assistant Plague Officer.
4. Rat fleas of Calcutta—Epidemiology of plague—by Dr. S. Raghvender Rao, Assistant Plague Officer.

Dr. S. Raghvender Rao of the Plague Department who was on deputation to the All-India Institute of Hygiene and Public Health, Calcutta, returned back during the year after submitting his thesis on "Studies on the Epidemiology of Plague." At the time of writing this report, news has reached us that the Syndicate of the Calcutta University has decided to admit him to the Degree of Science. He has a distinction of being the first Medical Officer to be awarded this Degree in Public Health by the Calcutta University.

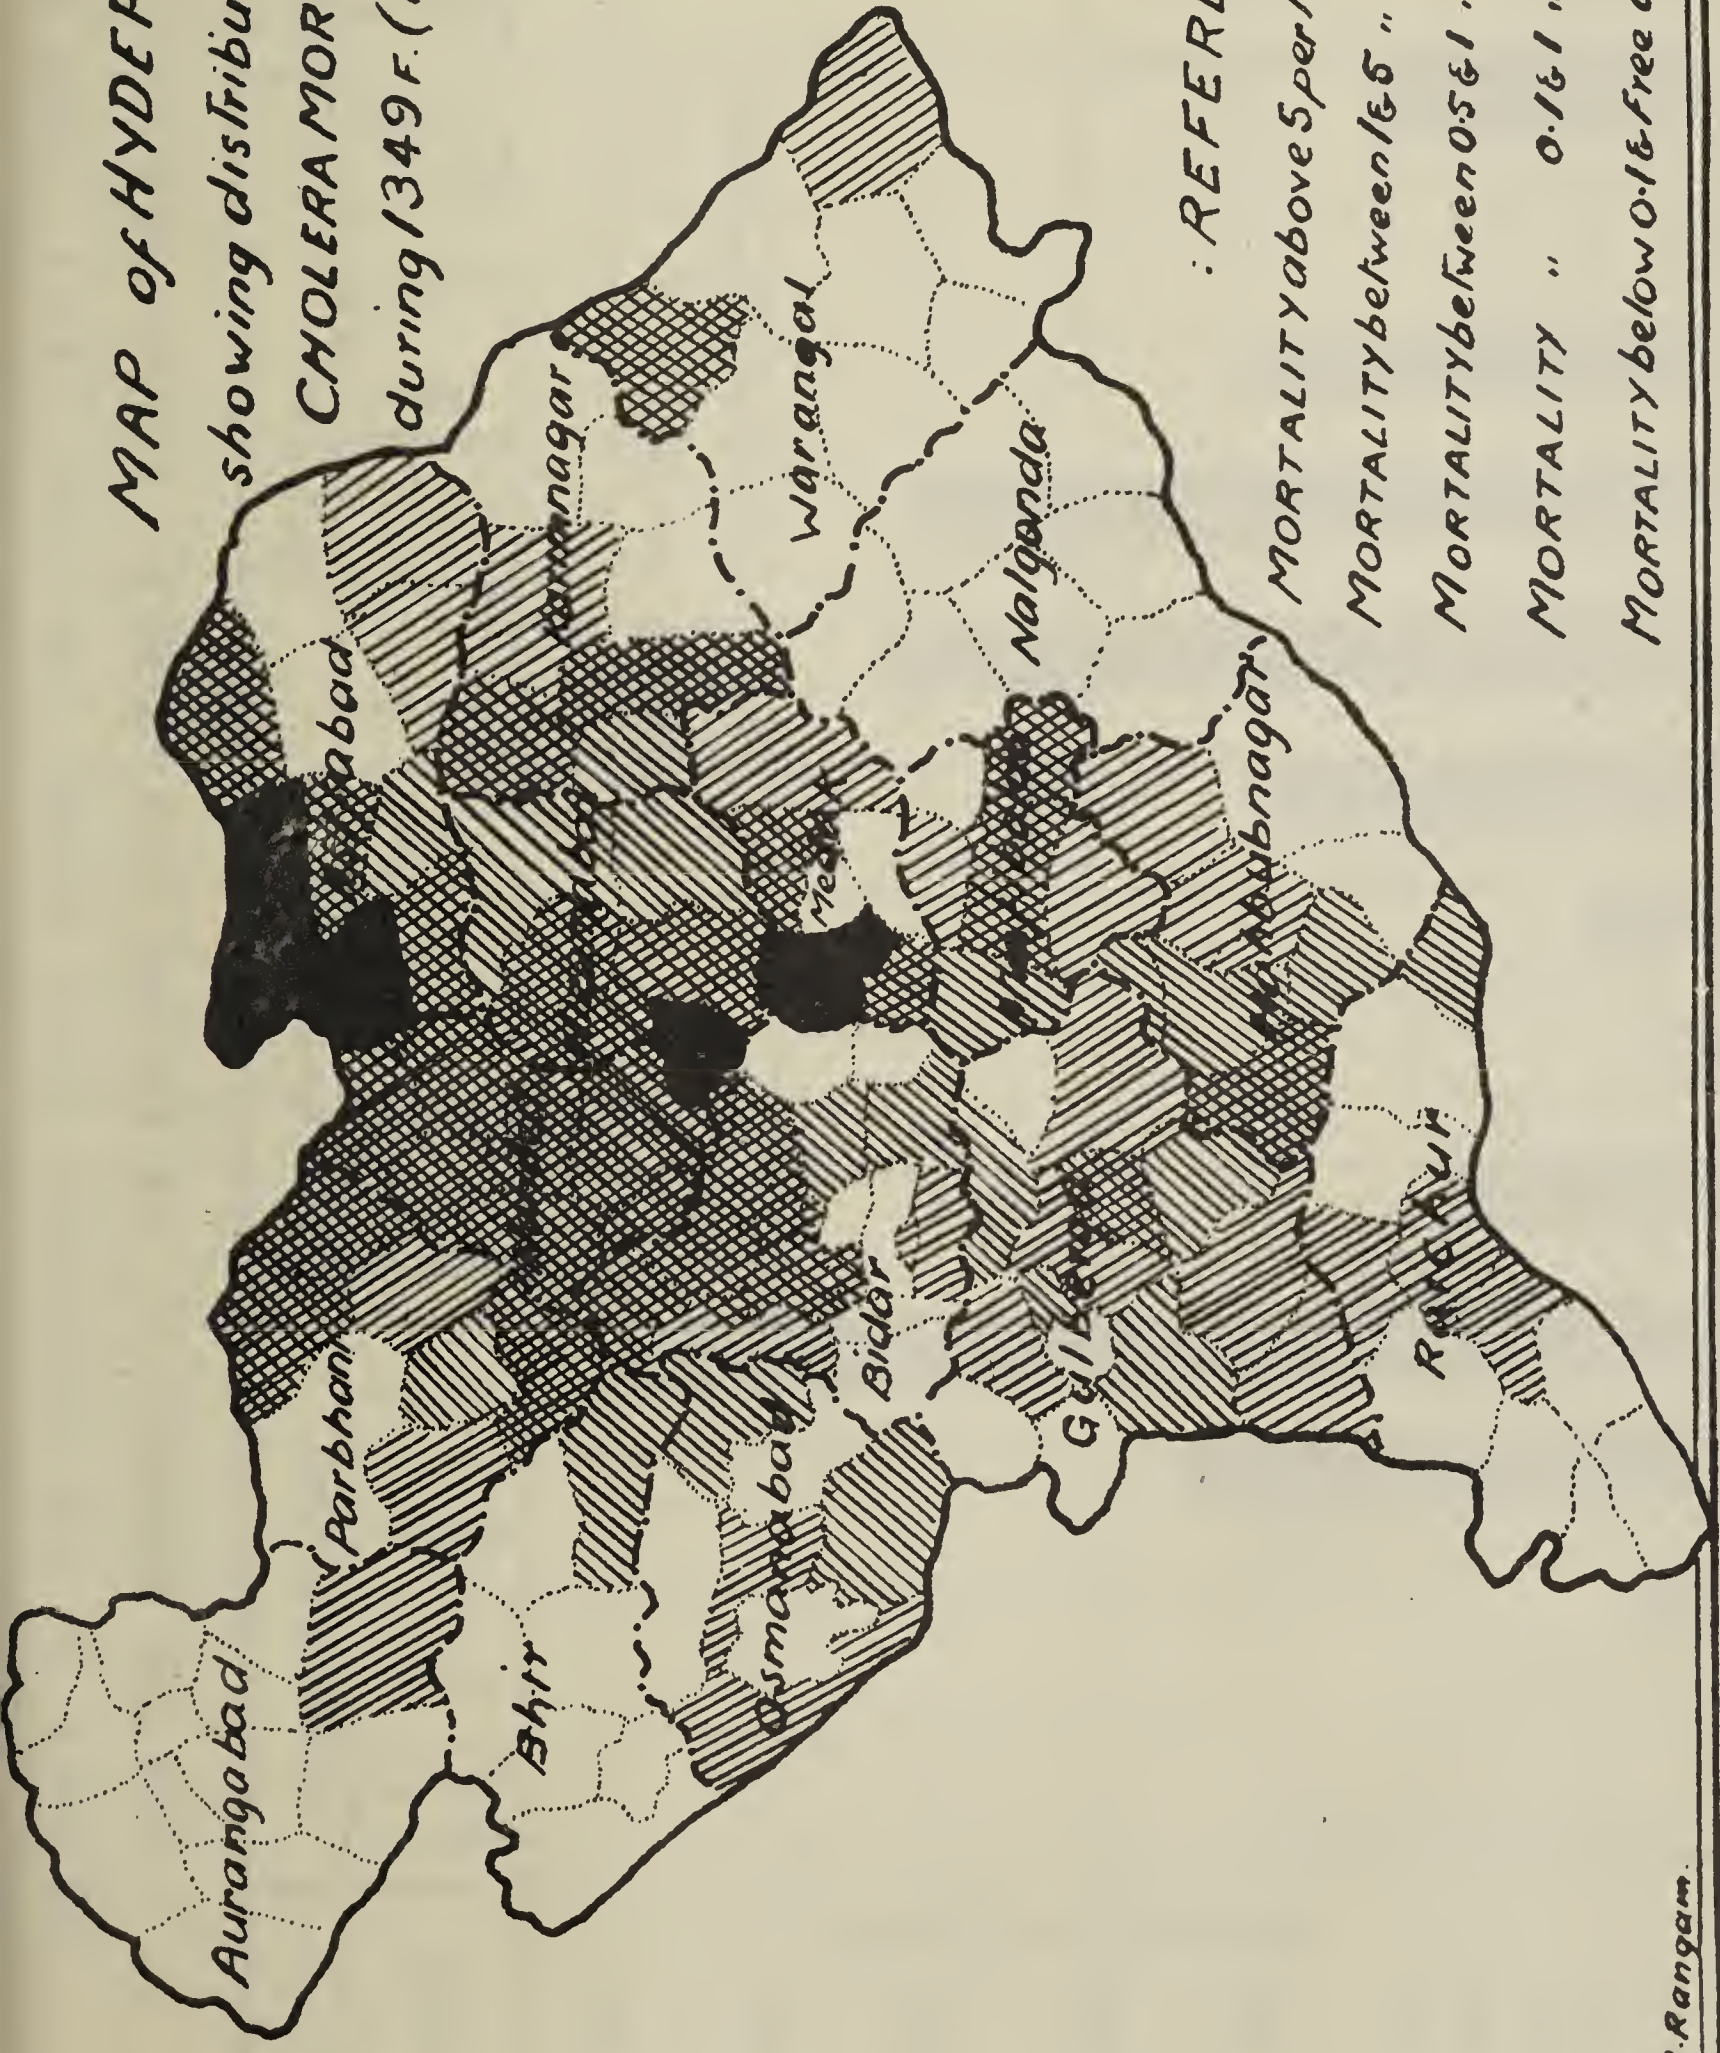

He was also deputed to attend the Indian Science Congress at Madras where he read his paper on "Rat fleas of Calcutta" investigated from a point of view of Epidemiology of plague.

8. *Cholera*:—Of the total number of 11,183 cholera deaths in the Dominions during the year 1,466 were reported from Non-Government Illaqs.

Cholera was imported into Medak district early during the year from a Paigah village of Nawab Lutf-ud-Dowla Bahadur in Narsapur taluq and the district remained infected throughout the year. From Medak

GRAPH SHOWING THE RELATIVE INTENSITY OF CHOLERA MORTALITY IN EACH

DISTRICT OF THE HYDERABAD STATE DURING THE YEAR 1349 F. (1940 A.D)
AND THE AVERAGE OF THE DECADE 1339 - 1348 F. (1930 - 1939 A.D.)

infection spread to the Canal Zone in Nizamabad, in the month of Ardibehist, as a result of infected pilgrims returning from Yedupalam Jatra and a severe epidemic resulted in that district.

Similarly Rajanagar and Kurumurti Jatras in the Samasthans of Mahboobnagar district were responsible for a fairly widespread epidemic in that district. The water-supply and sanitary arrangements at these Jatras was defective and they were not restricted to local pilgrims as recommended by the Public Health Department in view of the prevalence of the disease in that area.

Though Nanded suffered from Cholera for a smaller period than other districts, yet the virulence of the disease was very severe with the result that this district suffered heaviest during the year of report.

The inadequacy of the Public Health staff and the presence of infection in several districts made the adoption of control measures rather difficult. Doubts have been cast on the efficacy of cholera vaccine that was being used by the department for prophylactic purposes. The scheme for the manufacture of cholera vaccine from true strains of cholera vibrios within the State was sanctioned by Government towards the close of the year, this will now ensure supply of the right type of vaccine in the dominions.

The Assistant Bacteriologist who was deputed to Kasauli for learning the technique of large scale production of cholera vaccine has now returned and it is hoped that, early next year, cholera vaccine manufactured in our laboratories will be available for use throughout the Dominions. It is essential that all Non-Government Illaqas, Cantonments, Railways and Military areas should only use vaccine manufactured at the Government Public Health Laboratories.

From the number of inoculations performed which number 310,032 against 155,147 last year, it will be seen that this method of protection is gaining greater popularity than hitherto, it is therefore all the more important that vaccine of real prophylactic value should only be used.

9. *Mortality and case Fatality from the 3 important communicable diseases.*

	PER 1,000 POPULATION		Apparent case fatality rate ($d \times 100$) C
	Cases (C)	Deaths (D)	
Cholera	1.32	0.69	52.12
Small-pox	0.54	0.12	21.71
Plague	0.66	0.47	72.38

10. *Malaria.*—The need for anti-malarial measures in Nizamsagar Ayacut area cannot be too strongly emphasized as malaria in that district is assuming serious proportions and it would become increasingly difficult to control the disease in the large tracts of irrigated land if the proposed measures are indefinitely postponed. Apart from all humanitarian aspect of the subject, wisely planned anti-malarial operations are paying propositions from which there is often a direct financial profit upon the money invested and from which there is certainly an indirect profit in the effects which such measures have on the general prosperity of the community.

Anti-malarial measures in the 3 heavily infected taluqas of Hingoli, Kalamnuri and Jintur in Parbhani district estimated to cost Rs. 15,000 recurring and Rs. 3,000 non-recurring have been sanctioned during the year for a period of 3 years out of District Local Funds. The work started in Isfandar 1349 F., was in force as contemplated for a period of six months during the year. Six centres were established in the 3 taluqas for the purpose of anti-malarial campaign.

MAP of Hyderabad
City & suburbs.
showing SPLEEN INDEX

Each of these centres controlled 21 surrounding villages. Besides the routine anti-malarial measures 4,228 large pits have been filled and 917 drained by channelling in these villages. A total number of 20,483 malarial patients received complete course of treatment. Although it is too early to say what permanent results have been achieved from the first year of campaign but preliminary splenic index taken in the badly affected area has shown considerable decrease and the incidence of the disease has greatly diminished. The obliteration of the large number of permanent breeding places has no doubt paved the way for a permanent measure of control.

Anti-malarial measures for which the Local Fund Department has provided funds were also in force during the year in the following places:—

Utnoor and Rajura in Asifabad District.

Kalamnuri, Jintoor and Hingoli in Parbhani District.

Raichur, Gangawathi, Boyal Merchad and Anagundi Samasthan in Raichur district.

Narayenpet in Mahboobnagar district.

Mominabad in Bhir district, and

Gulbarga headquarters.

The work in Lingal in Mahboobnagar district has been in abeyance due to funds not being provided by the District Police during the year.

11. *Malaria Department, Hyderabad City*:—Sir Malcolm Watson, Director of Ross Institute, London, and Dr. Ramsay, Principal of Ross Institute, India, paid a short visit to Hyderabad in February during the year and were very much impressed by the results achieved by the Malaria Department of Hyderabad City since Sir Malcom's last visit to the place in 1337 Fasli. There has been a great decline in the number of malaria cases treated in the five large hospitals of the City during the year, the percentage of malaria cases to the total attendance being 0.7.

A reference to the splenic index map attached shows that the spleen rate generally has fallen below a point when malaria can hardly be regarded as a Public Health problem of any importance, but it should however be

remembered that this reduction has been brought about by incessant "recurrent anti-malarial measures" during the past eleven years and that the permanent anti-malarial measures to which attention has been drawn, year after year, have remained unattended. As long as the permanent measures are not taken the "recurrent anti-malarial measures" cannot be relaxed without fear of recrudescence of the disease.

Quoting the splenic index figures for the City and the Chaderghat sections of Hyderabad City for the year 1930 and comparing them with the figures for 1939, Sir Malcolm made the following observations:—

"These are remarkable figures, and indicate a success in the control of malaria that was hardly exceeded by the work at Panama itself. Nor is it the less remarkable when we remember it was done in an Indian City, to most of the inhabitants of which, modern ideas of the need for controlling mosquitoes have not been realised, and whose co-operation is not available."

and he advised

1. that no slackening off in the work of the control of malaria should be done. Any negligence or interference in the efficiency of the work, however, inadvertent, will be thought be promptly followed by a recurrence of the disease.
2. He strongly advised against the control of malaria being handed over to the Municipality and taken away from the Medical and Public Health Department.
3. The closing of the wells in the City which breed anopheline mosquitoes (*A. stephensi*) which are the carriers of malaria in the City of Hyderabad.
4. Prevention of rice cultivation within half-a-mile beyond the City Municipal limits and within municipal limits including the bed of river Musi, the Mushirabad Channel, the bed of the Mir Jumla tank, cultivation below the Mir Alam tank, Tarbund, Bahadurpura and Rangazpura.

5. Prohibition of sand excavation within the municipal limits and up to a half-a-mile beyond these limits.
6. Canalization of the Musi River into a 40 ft. channel beginning with that part of the river that lies between Muslam Jung and Afzal Gunj bridges and that it should later on be extended to reach a mile below 'Purana Pul' and a mile beyond the city boundary down the river.
7. The completion of canalization of Murki Nala (Dabirpura channel) and Mushirabad Channel up to Amberpet where they join the river Musi.
8. Draining of Hussain Sagar Valley.
9. Filling up of Mir Jumla tank-bed.
10. The selection of 3 men each to be sent to a separate Ross Institute Training Centre in India to be employed for survey work.
11. The deputation of the Deputy Director of Public Health and the Chief Malaria Officer to areas in Southern India where malaria control, both on the Indian and the European Estates is carried out by simple measures.

It will be noticed that more or less all these suggestions have, from time to time, been brought to the notice of Government by the Public Health Department.

To rid the City of whatever malaria still lingers and to abate the general mosquito nuisance that certainly prevails in certain areas of the city, the permanent measures referred to above should be taken up as soon as possible.

The cost of anti-malarial work in the City this year was Rs. 46,481-1-11 which works to one anna and eleven pies per head of population in the controlled area.

Dr. Sabri, Malaria Officer, Hyderabad City and Dr. Bhadrudin, Assistant Health Officer, Parbhani district were deputed during the year for training at the Malaria Institute at New Delhi and on the recommendation of Sir Malcolm Watson, Dr. Farooq the Deputy Director of Public Health and the Malaria Officer also

paid a visit to Malabar, Wynad, to study the naturalistic methods of controlling malaria. A proposal has been sent up to Government to appoint a full time entomologist in the Malaria Department and to depute Health Sub-Inspectors to three Ross Institute Centres in India for training in malaria survey work.

12. *Leprosy*:—The steady stream of lepers towards Dichpalli from all parts of the State show no sign of diminution and out of the 1,407 applicants for admission during 1939-1940, 695 were admitted. It was possible to refer many of the remainder to the outpatient Leprosy Clinics provided at 59 hospitals and dispensaries in the Dominions near to the homes of patients. At these Clinics, a total number of 2,936 patients received treatment. At Dichpalli Leprosy Hospital the number of patients discharged during the year includes 71 symptom-free cases and 242 cases discharged non-infective and with no signs of active disease. These figures are especially impressive when it is remembered that each patient so discharged represents months and often years of patient and persevering effort, not only on the part of the Medical Staff, but on the part of the patient himself, and this willingness of the patients to co-operate in their long and often painful treatment is in itself the clearest indication of the hope and confidence which the hospital inspires.

Rao Saheb Dr. Issacc Santra, Propaganda Officer of the British Empire Leprosy Relief Association (Indian Council), visited Hyderabad and during his stay of 2 months during Ardibehisht and Khurdad, he visited 57 villages in Osmanabad, Bidar, Gulburga and Raichur districts and our outdoor clinic in the districts of Mahboobnagar, Medak, Atraf-i-balda and Secunderabad and the Leprosy Hospital at Dichpalli. In an aggregate population of 60,084 in the villages surveyed he was able to find 635 cases of leprosy which gives an incidence of almost one per cent. but it varies from 0 to 8 per cent. in different quarters of a village. There is great variation among different castes too; in 1931 Census Report it is stated that "the relative prevalence of leprosy in the State is highest amongst Canarese, next highest among Muslims, comparatively low among the Maharattas." Contrary to this Dr. Santra found that the incidence is

quote high among the Mahratta districts visited via: Osmanabad where the rate is 11 per mille.

Certain indices for the districts visited are given below which are of Public Health importance:—

District	CASE TYPE	CHILD- HOOD	SEX INCIDENCE IN 100 CASES OF LEPROSY		TUBER- CULOID
	Rate	Rate	Male	Female	Percent.
Bidar	17.5	16.66	68.19	31.81	8.3
Gulburga ..	33	17	77	23	12
Osmanabad (P) ..	31.6	27	72.10	27.1	13.4
Osmanabad (Shahi) ..	29.6	30	69.74	30.26	10.5
Raichur	22.85	38.57	72.86	27.14	18.57

This cannot be taken as the actual incidence of leprosy throughout the districts visited because the major part of the survey was conducted in selected endemic areas.

The case type rate, *i.e.*, the number of infectious cases to 100 cases of leprosy, which as shown by the present survey is 27.5 or roughly amongst four lepers one is an infectious case is all important from Public Health point of view. Presuming as we did in the last annual report that there are 60,000 lepers in the State, 15,000 of them could be reckoned to be in an infectious stage and in a preventive scheme it is these 15,000 that are to be taken into consideration.

In recent years medical aid in this land has entered a phase of preventing diseases. Elaborate precautions are taken for the prevention of plague, cholera, small-pox, malaria and guinea-worm and it is but natural that the fight against leprosy should also commence. The problem is so intimately connected with housing, general sanitation, food, social habits and ignorance of the people that medical men will require the co-operation of social workers, educationalists and philanthropists to cope with the problem.

In order to standardise the maintenance of records of leprosy cases treated at the various district hospitals and dispensaries so that useful statistics could be made available, three registers namely, (1) Admission Register, (2) Treatment Register and (3) Case-Record register which have been drawn up in consultation with Dr. Santra have been introduced at each of the 59 clinics. A monthly return of work done in these clinics is now sent to the Head Office every month.

13. *Yaws*:—Map No. 10 attached indicates the areas so far found to be affected with Yaws in the Dominions. During the year of report, an intensive campaign against the disease was carried out in the 3 districts of Warangal, Karimnagar and Asifabad, parts of which are badly affected. Amerabad Taluq of Mahboobnagar district was also included in the campaign though a few cases were reported in that area. Cases were reported for the first time during the year from Kamareddy taluq of Nizamabad District. Only 7 cases have been found and treated in this area so far.

Intensive campaign against Yaws was first organised in the year 1347 Fasli when 4 units in-charge of medical officers equipped with a travelling dispensary for the treatment of Yaws cases were sent out into the jungle area and during a period of 4 months 5,730 cases were treated. Another intensive campaign was organised during the year under report consisting of 6 units. Seven Taluqs in Warangal, 7 in Asifabad, 4 in Karimnagar and one in Mahboobnagar district were visited by the inoculating parties. 548 villages in these areas were reported to be affected in which a total number of 10,516 cases were treated during the present campaign of which over 80 per cent. have been declared to be clinically free from the disease.

The campaign which started in Farwardi was closed at the end of Sherewar. The actual cost of the campaign during the year under report was Rs. 17,726-5-1 so that the cost per patient treated works out at 15 annas for drugs and 12 annas overhead charges. Expenditure incurred during the campaign in 1347 Fasli was estimated at Re. 1 for drugs and Rs. 2 overhead charges. Thus not only was the total number of patients treated

MAP of HYDERABAD.

showing the areas
where

YAWS (Koya Disease)
is prevalent

during this year's campaign was nearly double of 1347 Fasli but the expenditure per case treated was appreciably less, i.e., Rs. 1-11-0 against Rs. 3 during the previous campaign.

The drug used throughout this campaign was Thio-sarmine. Treatment against Yaws is not only available in all dispensaries situated in the endemic areas, but the Assistant Health Officers of the district treat these cases as a routine during their tours of the affected areas. In the year 1348 Fasli when no special campaign was organised, 2,384 patients were treated at the various dispensaries.

The objective is the eradication of the disease from the affected areas, which hinges on the control and treatment of all infectious cases. To attain this object, the intensive campaign, now started, should be continued for a few years to come. Three well-known facts are known regarding the transmission of the disease. In the first place, a source of contact seems necessary, secondly infection takes place at the site of some skin trauma and thirdly damp seasons and damp places are specially favourable for the spread of the disease.

14. *Tuberculosis.*—(a) *Tuberculosis Clinic:*—The new Tuberculosis Clinic at Dabirbpura was formally opened by the Hon'ble the Resident in February this year. An X-Ray unit and a well-equipped Laboratory and other equipment has been provided. The domiciliary visiting and survey work have not however been started though this constitutes one of its primary objects. This was, to a great extent, due to the fact that properly trained 'Mulki' Health Visitors were not available. It is hoped that this important work will be started early next year. 6,659 new cases received treatment as outpatients at the

[Statement,

Clinic this year against 5,299 in 1348 Fasli. A classification of these cases is given below:—

	MALES		FEMALES	
	Adults	Children	Adults	Children
Muslims	1,944	261	2,234	314
Hindus	949	87	733	69
Christians .. .	17	8	20	7
Other castes ..	3	2	8	3
Total ..	2,913	358	2,995	393

From the above it will be noticed that adult Muslim females constitute a large majority of the total attendance. The reason is not difficult to seek. Living in insanitary dwellings under purda system is the cause of this appalling prevalence of disease among them. Children nursed by and living together with their tuberculosis mothers are exposed to a danger from which it is indeed difficult to save them.

Patients that come to outdoor clinics are mostly those that show advanced symptoms of Tuberculosis disease. The work of the clinic is to detect early infection among contacts of these open cases of tuberculosis. Tuberculosis is such an insidious disease that a person suffering from it does not generally seek advice until it is well advanced. It is therefore of great importance in the successful conduct of the control programme to go out into the field and find him. This is the primary function of the tuberculosis clinic. This work cannot of course be satisfactorily conducted by a single institution for a population of over 4 lakhs. A number of clinics situated in the congested areas of the City are required to meet the situation and this, in the main, is the responsibility of the Hyderabad Municipal Corporation.

Government have been requested for permission to train two District Civil Surgeons every year, by rotation,

under the aegis of the Central Tuberculosis Association of India, New Delhi, in Tuberculosis work. As soon as funds are made available it is proposed to open a Tuberculosis Clinic at each district headquarter town.

(b) *Tuberculosis Hospital*:—The Lingumpalli Tuberculosis Hospital and the Tuberculosis Ward at the Osmania Hospital have together treated 832 in-patients during the year, the total number of beds available at the two places is only 57. The need for the provision of in-patient accommodation for the tuberculosis patients is very great indeed. The question of acquiring the “ Eram Numā ” Palace, six miles from the City, for the purpose of a Tuberculosis Hospital was taken up during the year and further extensions to the Lingampalli Hospital were consequently dropped.

Dr. Frimodt Moller, Medical Commissioner, to the Tuberculosis Association of India, paid two visits to Hyderabad during the year and his expert advice on the future development of Tuberculosis Schemes in Hyderabad was taken.

Due to the generosity of Lord Nuffield, two Iron Lungs were presented to the Department during the year. One is kept in the Outpatient Department of the Osmania Hospital and the other at the Tuberculosis Clinic at Dabirpura, Hyderabad.

(c) *State Tuberculosis Association*:—The rules and regulations drawn up and sent up to Government last year for the State Tuberculosis Association were sanctioned during the year of report. The Association will be inaugurated early next year.

Dr. Farooq, in his capacity as a member of the Tuberculosis Association of India attended its annual General Meeting at New Delhi in Ardibehisht 1349 Fasli.

(d) *Effect of bad housing and overcrowding on Health and City Improvement Schemes*:—Numerous examples which suggest the association of bad housing and tuberculosis could be cited from investigations carried out in other countries. To sum up these investigations, it has been definitely shown that housing conditions as a part of the environmental conditions determine

the spread of disease. To prevent the disease, it is necessary to create proper environmental conditions, besides making a determined attack on the sources of infection. Human resistance to disease is maintained by—

(a) adequate nutrition.

(b) absence of mass dose of infection.

This cannot be achieved so long as housing conditions remain unhygienic, and overcrowded.

In the City of Hyderabad, the City Improvement Board since its inception in 1914 (1323 Fasli) have made great efforts to clear slums and reconstruct healthy dwellings on the sites so cleared. 37 congested slums have been demolished up to date and 3,508 sanitary houses have been constructed in various parts of the City at a total cost of eighty one lakhs of rupees. Further clearing of slum is in progress for which Government have made a provision of six lakhs of rupees annually. In addition to this, a loan of twenty-five lakhs of rupees has been obtained for constructing low-rent houses and this amount is proposed to be spent at the rate of five lakhs a year.

Government have issued circular orders with regard to town and village planning in urban and rural areas in the districts. Building bye-laws recommended by the Public Health Department are being enforced in all towns with a population of over 5,000. District Boards and Municipalities are improving big towns by town extensions in consultation with the Public Health Department. All town improvement and development schemes including those of rural reconstruction and labour colonies are changing though slowly, as a result of rural uplift work launched by Government in various parts of the Dominions.

15. *Medical Inspection of Schools.*—(a) *Districts:*—Of the 20 Government High Schools and 83 Middle Schools, Girls and Boys in 19 High Schools and 77 Middle Schools were medically examined by the district medical staff. The Government Primary Schools which number 2,249 are unfortunately not covered by this scheme of medical inspections therefore only 24 such schools were visited by the medical staff. While preparing a revised

scheme due consideration will be given to this deficiency in the system of school medical inspections existing at present.

(b) *Hyderabad City*:—In addition to the 28 Boys' Schools and 10 Girls' Schools which were previously medically inspected, the Girls Industrial School and Osmania College for Women were included. The total number of boys and girls examined during 1349 F. were 12,059 and 4,207 respectively as against the previous year's figures of 14,397 boys and 3,661 girls. Of these 27.48 per cent. were referred to for treatment at hospitals as compared with 28.46 per cent. which was the figure for 1348 Fasli. 1,254 children were vaccinated against small-pox.

The experiment in milk feeding which was begun in Mehir 1348 F. was concluded in the month of Khurdad 1349 F. The Education Department contributed one thousand rupees towards this experiment which was carried on in four schools of the City. The result of this work gives proof of the benefits to be derived from the addition of whole-milk, skim-milk or calcium lactate to the normal diet of the scholars, the addition of whole-milk however being the most efficacious.

240 school boys were used for this experiment and of 130 who were definite cases of nutritional defects, 105 have shown marked improvement; children, teachers and parents alike have been impressed by the satisfactory results of this experiment. The average number of feeds per boy has worked out at 140 and the cost has been 6 pies per day for each boy.

It is indeed a pleasure to record the response of the Education Department to requests for improvements in buildings and school equipments and the better co-operation which has existed this year between the school, the home and the medical officers. This condition of affairs has gone far towards promoting the smooth working of this scheme and the consequent improvement in the general health and development of the school children of Hyderabad City.

16. *Health of Jails*:—The average daily jail population of the district and Central Jails was 3,022.

The undermentioned table gives the authorized accommodation and the daily average population in jails and sub-jails.

	Authorized accommodation.	Daily average population.
Aurangabad ..	900	330
Bhir ..	91	14
Parbhani ..	179	26
Nanded ..	78	36
Gulburga Central Jail	866	605
Raichur ..	50	43
Osmanabad ..	90	54
Bidar ..	140	95
Medak ..	100	31
Nizamabad ..	100	83
Mahbubnagar ..	78	41
Nalgonda ..	110	26
Warangal Central Jail	437	344
Karimnagar ..	110	76
Asifabad ..	96	29
Hyderabad City Central Jail ..	1,539	1,189
Total ..	<u>4,964</u>	<u>3,022</u>

There was thus no overcrowding in jails of the dominion.

The general sanitary condition of jails and the health of the prisoners remained satisfactory during the year. Taking the daily total of the sick during the year as basis, a ratio per thousand of the daily average strength of the jail population was reported as under:—

Raichur ..	179
Osmanabad ..	166
Asifabad ..	142
Gulburga ..	137
Medak ..	117
Parbhani ..	104
Nalgonda ..	46
Aurangabad ..	29
Warangal ..	17
Nizamabad ..	10

The principal recorded causes of sickness were malaria, dysentery, diarrhoea, pyrexia of uncertain origin, anæmia, debility and respiratory diseases. Eight cases of infectious diseases were reported from the Central Jail at Hyderabad, 2 cases of yaws, 2 of small-pox and 4 of chicken-pox. Sporadic cases of cerebro-spinal meningitis were reported from Gulburga Jail during 1348 and 1349 F. The Assistant Surgeon from the Bacteriological Laboratory was deputed to make investigations and as a result of his report a number of "Carrier" convicts were isolated and others received regular prophylactic treatment. Provision of better ventilation and spacing of beds in wards was recommended among other preventive measures; observance of the measures recommended resulted in the complete disappearance of the disease from the Jail.

The death rate is calculated as a rate per thousand of the average daily jail population. The rate for the dominion for 1349 F. was 14.5 per mille.

The undermentioned table gives in percentage the average gain or loss in weight of prisoners on discharge in the various districts.

District	Gained weight	Stationery	Lost weight
Nanded ..	95	5	..
Nalgonda ..	38	62	..
Mahbubnagar ..	39	60	1
Osmanabad ..	6	93	1
Karimnagar ..	63	35	2
Hyderabad City ..	3	95	2
Raichur ..	17	79	4
Bidar ..	31	64	5
Asifabad ..	26	68	6
Aurangabad ..	35	59	6
Parbhani ..	24	66	10
Warangal C. J. ..	75	15	10
Gulburga C.J. ..	43	35	22
Bhir ..	9	78	13
Nizamabad ..	58	35	7

The Mental Hospital which was housed inside the Central Jail at Hyderabad has been moved to Jalna and this has reduced the congestion in the Hyderabad Central Jail to a great extent.

17 *Temperature*.—The highest, lowest and mean temperature recorded in the various districts during the year of report were as follows:—

District	Highest	Lowest	Mean
Aurangabad	109°	49°	78°
Bhir	106°	79°	91°
Parbhani	107°	48°	78°
Nanded	114°	56°	85°
Gulburga	111°	48°	85°
Raichur	110°	56°	80°
Osmanabad	106°	71°	88°
Bidar	107°	55°	81°
Medak	108°	48°	78°
Nizamabad	112°	45°	78°
Mahbubnagar	114°	65°	..
Nalgonda
Baghat	109°	74°	91°
Karimnagar	118°	50°	84°
Warangal	113°	52°	92°
Asifabad	118°	71°	94°
Hyderabad City ..	109°	46°	79°

18. *Rainfall*:—The normal (40 year average) rainfall for the Dominions is 30.28 inches but during the year of report the average was 34.98 inches against 20.4 inches in the previous year. Its distribution in Telingana and Marathwada was as follows:—

	Normal.	Average in 1349 F.
Telingana ..	32.37"	39.19"
Marathwada ..	28.00"	30.17"

The average and the normal rainfall during the various monsoon periods in 1349 F. is tabulated below:—

	North-East Monsoon	Intermediate period	South-West Monsoon
Normal	2.64"	2.69"	24.95"
Average	4.87"	3.83"	26.28"

19. *Town Improvement Schemes*:—The Public Health Department approved after inspection the following extension schemes and suggested improvements wherever necessary from sanitary point of view:—

(a) Town Development Schemes at Adilabad and Deverkonda.

(b) Lay out plans of Chipadandi village, Labour Colony at Nanded and the Civil Lines at Kantheshwar (Nizamabad).

The undermentioned plans received during the year are kept pending for inspection early next year:—

(i) Town Extension Schemes at Saidapur, Laxettipet, and Mancherial.

(ii) Officers Colony at Warangal and the Labour Colony at Jalna.

(iii) Grain and Cotton Market at Parbhani.

20. *District Water-supply and Drainage*:—The District Water Works Department looked after the management of the following completed system of protected water-supplies:—

Major Towns:—Jalna, Aurangabad, Latur, Raichur, Gulbarga, Nander, Warangal, Seram, Osmanabad and Tuljapur Water Works.

Schemes under Progress:—The remodelling of Gulbarga and Nizamabad Water-supply and Drainage Schemes are nearing completion. On the whole, the work of the department both in running the completed schemes and in attempting fresh schemes has been satisfactory and it is hoped that the same rate of progress will be kept up even in future years as the Government have given sufficient funds for this type of public utility schemes.

The urgent need for the provision of protected water-supplies in places where larger Jattras and Uruses are held has been stressed by the Public Health Department and it is hoped that the Water Board will give special consideration to this important recommendation because explosive outbreaks of cholera epidemics have in the past originated from such centres due to lack of provision of protected water-supplies.

The Public Health Department scrutinized the under-mentioned Water-Supply and Drainage Schemes proposed by the District Water Works Department during the year of report.

- (a) (i) Bidar, Pattan, Mominabad and Chincholi Water-Supply Schemes.
- (ii) Scheme for augmenting and remodeling the Water-supply at Parbhani.
- (iii) Supplementary Scheme for Water-supply of Gulburga.
- (b) (i) Pattan, Chincholi, Mominabad, Wadapally (Warangal) and Bidar surface drainage schemes.
- (ii) Revised Surface Drainage Schemes for Medak and Nizamabad towns.
- (iii) Scheme for improving the Gonda Nala and Murki Nala in Aurangabad town.

21. *Health Education*:—Health education is the Cap Stone of the entire health programme. The extent to which we are able to get the individual citizen attuned to an understanding of the problem and its solution will be the yard-stick for measuring permanent accomplishments. Our main hope lies in teaching the younger generation to do and think for themselves and pass their knowledge on to succeeding generations. With this object in view the Public Health Department carried out an incessant health propaganda by all the means at its disposal during the year.

The cinema car toured for 112 days and visited 79 villages. The doctor-in-charge during his tours delivered 102 lectures and gave many demonstrations. He also treated 2,455 cases during his rounds.

The Artist employed for the preparation of posters has prepared several useful posters during the year of report of which a number of them are now being printed for distribution in rural areas. 11,000 hand-bills and 2,000 posters on plague were distributed during jatras and uruses this year, and to the previous stock of leaflets 30,000 other illustrated leaflets on epidemic diseases in Telugu, Marathi, Canarese, Urdu and English have been added and distributed to the District Health Officers.

A Health Stall was opened at the Industrial Exhibition at the Public Gardens during the year which attracted a good deal of public attention.

*22. Physical Education:—*Physical Training is compulsory in all Primary and Secondary Schools. One period of 20 minutes daily is allotted for all Primary Classes and two periods of 45 minutes each, per week, in all Secondary School Classes. The syllabus is drawn up by the Department of Physical Education and is followed by all schools in H.E.H. the Nizam's Dominions. The work is entrusted to trained teachers in Primary Schools, and to trained drill masters in Middle Schools. In High Schools there are drill masters as well as Physical Instructors trained in the Government College of Physical Education.

*Scouting:—*The Organising Commissioner is in charge of the Scout movement in the Dominions, and the Boy Scouts Headquarters is responsible for the organisation and supervision of Scout Troops.

The Dominions are divided into six spheres, namely, Balda City, Balda, Chaderghat, Gulburga, Aurangabad, Medak and Warangal. Each area is under the control and supervision of a Local Association of the same name. All troops follow the programme drawn up every year by the Headquarters, and are regularly inspected by the Organising Commissioner and his two Assistants.

At present the total number of Scout troops is 205, and the number of scouts is 5,988. During the year, there has been an increase of 11 troops and 458 scouts. In order to produce more scout masters, training camps are held in various centres. Seven such camps were held and 237 scouters trained during the year under report.

*23. Maternity and Child Welfare Service.—*During the month of Dai 1349 F. Government sanctioned the appointment of a whole-time Woman Medical Officer of Civil Surgeon's grade for the post of Child Welfare and Maternity. This was in accordance with the proposal of the *ad hoc* Committee for Child Welfare and Maternity set up by the Central Advisory Board of Health in 1938.

The duties of this officer during the year were mainly associated with propaganda work which included talks and lectures to mothers—expectant and post-natal, lectures on mother-craft to school girls and Guides and preparation of pamphlets and posters. The supply of a magic lantern and appropriate slides would be invaluable for popularising this branch of preventive medicine.

Regular daily visits to the City Centres for rendering advice and treatment of common minor ailments among mothers and children, conducting ante-natal clinics and home visits have been included in the routine duties of this officer who has provided a link between these centres and the various treatment centres of the Medical and Public Health Department. There is room for much improvement in the equipment of the City Child Welfare Centres and in spite of the increase of work brought about by the increased popularity with a consequent average of 588.6 per centre, the Health Visitors “coming on cheerfully” with this number as against 200 which has been set as the standard number of births which any Health Visitor can adequately supervise.

293 children and 400 expectant and post-natal mothers have been treated in the hospitals and dispensaries maintained by the Medical and Public Health Department. 10 mothers were referred to our Tuberculosis Centres and 19 ante-natal cases were treated by the dentist, of the Zenana Hospital. 81 children suffering from rickets were most successfully treated at the Ultra Violet Clinics held thrice weekly at the Osmania General Hospital while our Venereal Clinics helped greatly in treating syphilitic mothers and children. The provision of such facilities by the municipality will supply an urgent need and do much towards relieving the existing congestion at the above mentioned institutions.

Touring for purposes of inspection of existing centres and Maternity Hospitals in addition to propagating knowledge in this direction has borne good fruit, and in addition to the previously existing centre at Nizamabad and the recently equipped building at Gulburga work is in progress, for the establishment of such centres and Maternity Hospitals at Latur, Jalna and Raichur a new type design for the latter place has been supplied; this building will be a marked improvement in the previous

type design buildings. A visit to Madras paid by the Officer in a private capacity has proved to be of material benefit. The valuable information which this visit has yielded has been the result of the facilities so kindly provided by the Director of Public Health and the Assistant Director of Maternity and Child Welfare, Madras.

The importance of the indigenous dai is not to be denied, her co-operation is essential in establishing appreciation of the "Better Midwifery Movement." In Bombay and Hyderabad (Sindh), dais schools have met with great success and in these places the "educated Dai" has almost entirely replaced her ignorant and conservative rival. A practical insight of our medical officer into the working of these schools would be of practical value to our scheme.

Efforts at establishing work in Child Welfare and Maternity are in the embryological stage of development. A scheme has been submitted to the Local Funds Department in connection with this work and if this is put into practical effect it will produce results bearing favourable comparisons with those Provinces of India where for many years this progressive section of Public Health work has enjoyed a well deserved popularity.

24. *Public Health Schemes*:—Of the various proposals recommended in the year 1348 F. for improvement of Public Health to which detail reference was made in that year's administration report, Government have sanctioned the following:—

1. The Second Grade Health Inspectors' Scheme of providing 2 extra Health Inspectors in each district in place of a Deputy Inspector of Vaccination, a Health Sub-Inspector and a Relieving Vaccinator. This useful scheme has been brought into force during the year in the districts of Osmanabad, Gulberga and Mahbubnagar.

2. The establishment of a Health Inspectors' Class in Hyderabad. The class will be started in Azur 1350 Fasli. A comprehensive syllabus has been drawn up and printed for distribution. In addition to lectures and demonstrations on various public health subjects practical training has been provided in vaccination, anti-plague and anti-malarial measures. Sanitary Inspections have been

arranged with the municipalities of Secunderabad and Hyderabad in addition to which, training in rural sanitation and sanitation of fairs and festivals have been included in the course.

3. Anti-malaria scheme for the 3 taluqs of Hingoli, Jintur and Kalamnuri in Parbhani district was sanctioned and work started. The good work done during the year has been referred to under "Malaria" section.

4. Scheme for the preparation of cholera vaccine in the Dominion at the Chemical and Bacteriological laboratory. The Assistant Surgeon who was deputed to Kasauli laboratories has returned after training and the preparation of vaccine has been commenced. The vaccine will be available for distribution in 1350 F.

5. The Post of a whole-time Woman Medical Officer-in-charge of Maternity and Child Welfare work has been sanctioned to which Dr. Mrs. Maqbool Ali, M.R.C.S., L.R.C.P., D.T.M. and H. has been appointed. The work done during the year has been referred to under the section "Maternity and Child Welfare Service", para. 23.

6. The rules and regulations of the Tuberculosis Association have been sanctioned.

7. Six units, each under a medical officer, for *intensive campaign against yaws* for a period of 6 months was sanctioned. Resume of work done by these units during the year is given under "Yaws", para. 13.

8. The post of an Artist in the Special Plague Department, for preparing posters, etc., has been approved and the appointment made.

9. A Council Sub-Committee was appointed to consider the question of *permanency* of "*Public Health Scheme*." The Committee RESOLVED that there was full reason for an additional increase in the expenditure of Public Health and Medical relief in the dominion and that the temporary Public Health scheme should be made permanent and that in future no recurring expenditure should be budgetted from Local Fund medical cess balances of the districts. In pursuance of this decision Government is being approached to provide from the Central Revenue that portion of the extra expenditure

which was so long provided from the uncertain Local Fund medical cess balances of the districts and thereby to place the present Public Health Organization on a permanent basis.

10. Anti-malaria schemes at Utnoor in Asifabad and Narayanpet in Mahbubnagar have been extended for a period of 2 years.

11. Anti-rabic treatment Centres which were limited to five centres (one in Hyderabad City and four in the districts) were extended to all the district headquarter hospitals at the close of the year of report.

The other proposals made in 1348 F. important among which are,

1. The surveys scheme,
2. The Nizamabad anti-malaria scheme,
3. The proposal for the establishment of Child Welfare Centres in the districts,
4. The appointment of Municipal Health Officers in large district towns,
5. The anti-plague measures for Sadaseopet, and
6. The appointment of 16 more travelling dispensaries, remained under consideration of Government when the year ended.

The following new proposals were recommended to Government in 1349 F.:—

1. Establishment of 4 rural sanitation units for the improvement of sanitary conditions in villages selected under the rural reconstruction scheme. Each unit is to consist of a Sub-Assistant Surgeon trained in health duties, a Health Inspector and necessary menial staff. It is proposed to start work first, as an experiment, for a period of 3 years in selected districts, one in each of the 4 Subhas. Each unit is estimated to cost Rs. 5,000 recurring annually and Rs. 2,000 non-recurring.

2. The establishment of a Centralized Bureau of Vital Statistics under a trained Statistician in the Office of the Director of Public Health and the Centralized system of collecting vital statistics recommended by the Central Advisory Board of Health in 1939 to which a

detail reference has been made in para 4, "Birth and Death Rates." The cost of the proposal is estimated at Rs. 17,500 recurring and Rs. 5,000 non-recurring.

3. A modified sanitation scheme for the 28 frontier villages surrounding Secunderabad Cantonment has been suggested. It is imperative that there should be a unified control as far as Public Health and Sanitary requirements of these villages are concerned as uncontrolled sanitation and epidemics in these villages belonging to different authorities threaten the health of the Cantonment area. The scheme is estimated to cost Rs. 25,000 recurring and Rs. 30,000 non-recurring.

4. Appointment of an Entomologist in the malaria department in place of the existing Assisting Surgeon. The need for this is keenly felt.

5. Deputation of three Health Sub-Inspectors of the department to three Ross Institute Centres for training in Malaria Survey work.

6. Clerical Staff for Woman Medical Officer in charge of Maternity and Child Welfare.

7. Anti-malaria schemes for Nirmal, Boath, Kinwat and Sirpur taluq headquarters and surrounding villages within a radius of 10 miles of the town. The Local Fund Departments have been requested to provide a sum of Rs. 1,500 for each of these places together with an allowance of Rs. 30 per mensem to the medical officers of Utnoor, Rajura, Kinwat, Boath and Sirpur. The anti-malarial schemes at Rajura and Kinwat were of course sanctioned some time ago.

8. The provision of a temporary Plague Hospital at Latur for the trial of "Sulphathozol" on plague cases. These trials have been proposed to be made in conjunction with the Director of Haffkine Institute, Bombay, who has undertaken to send a unit with a fully equipped laboratory consisting of one senior member of their staff, one medical officer, four laboratory assistants, 3 trained nurses; while we have provided a Resident Medical Officer, two compounders and undertaken to put up the temporary hospital with its equipment and to generally look after and maintain the patients while the trials are undertaken. The revenue Department have sanctioned a sum of Rs. 7,000 for this purpose. The other expenses

are being met from the "Gunjaish" at the disposal of the Public Health Department. At the time of writing this report the Drug has been tried on a good number of cases and has yielded excellent results.

9. The three undermentioned Draft Acts, which were referred back by Government, were greatly revised and brought up to date and resubmitted to Government during the year:—

1. Vaccination Act.
2. Registration of Births and Deaths Act.
3. Infectious Diseases Act.

25. *Sanitary Inspections and other Visits*:—1. The Director, Medical and Public Health Department during his routine inspections of dispensaries also made sanitary inspections of district and taluq towns and rural reconstruction villages.

2. (a) The Deputy Director of Public Health was on tour for 25 days in rural areas for inspection of general sanitation and epidemic control measures and visited 42 villages, 15 taluq headquarter towns and 6 district headquarter towns. Early during the year he was deputed to Bangalore and Madras to study the centralized systems of collecting and compiling vital statistics where he toured for a period of 16 days studying at the same time other public health activities in Madras and Mysore.

(b) As a member of the Tuberculosis Association of India he attended in Ardibehisht the Annual General Meeting of the Association, held at the Viceroy's House, New Delhi.

(c) In the month of Thir he accompanied by the Chief Malaria Officer spent 12 days in Southern India studying the anti-malarial measures in Malabar (Wynad).

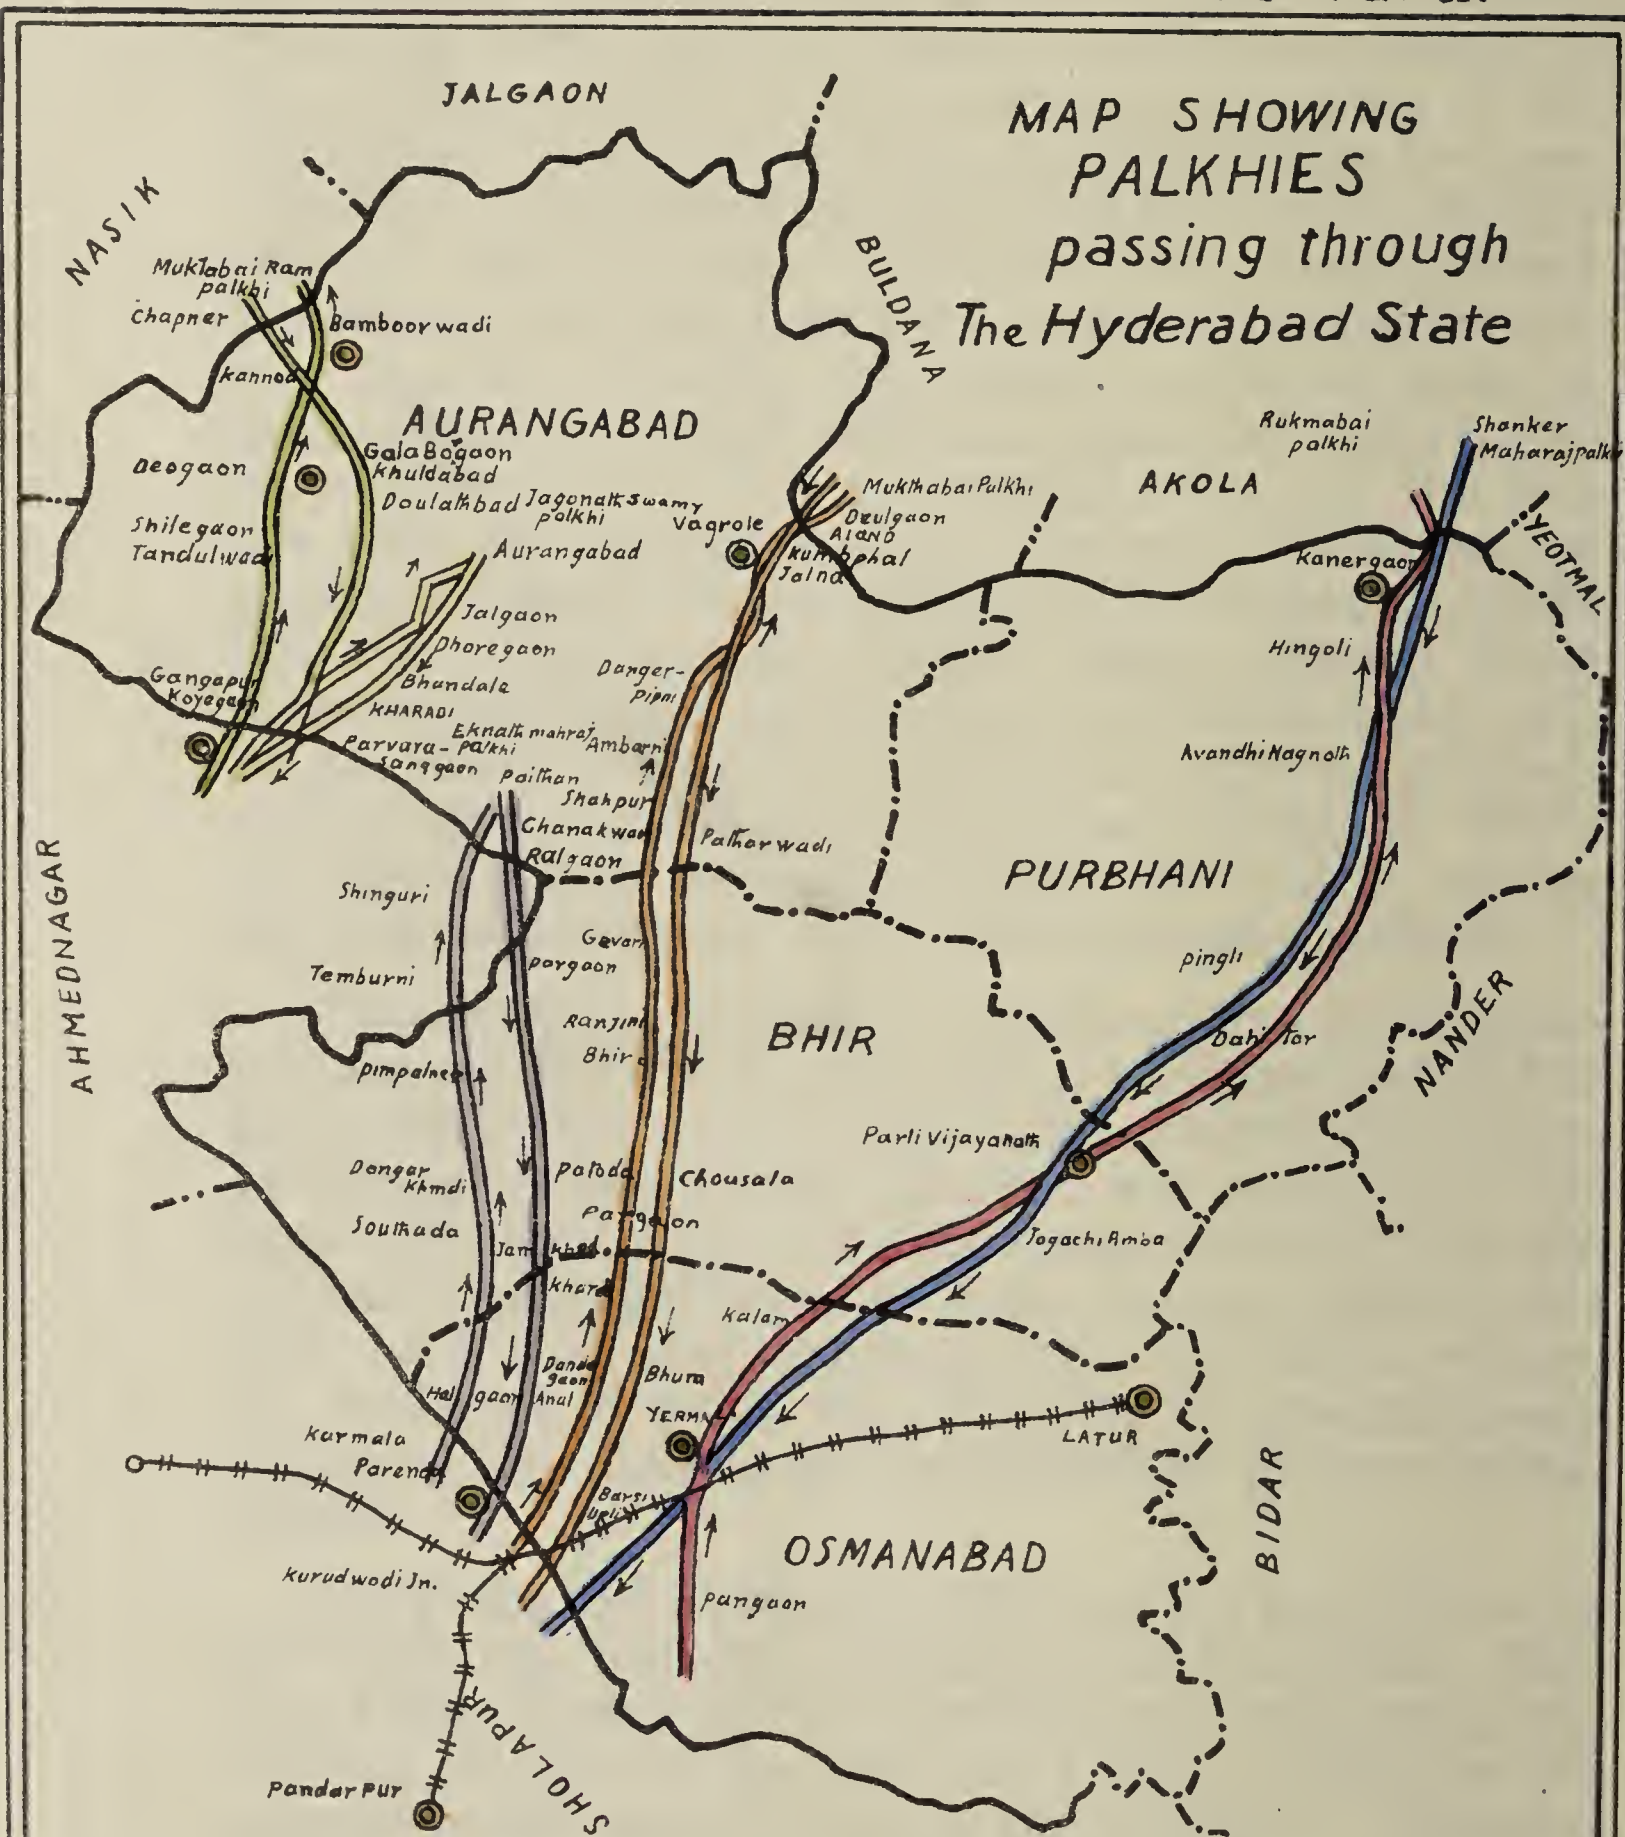

(d) He also accompanied the Hon'ble the Army and Medical Member to Poona to attend the 3rd meeting of the Central Advisory Board of Health in July 1940.

3. The District Health Officers supervised the Public Health and Vaccination work in their respective districts as usual. On an average each districts health officer was 24 days on tour during the year which also includes time spent on inspection of dispensaries.

26. *Rural Reconstruction*:—The district health staff have reported all round improvement during the year in the selected villages in their districts where rural uplift work has been started. Public health propaganda in these villages is one of the important activities of the department and to this end the health staff has been enjoined to pay special attention during their tours. Health talks on various public health subjects, magic lantern demonstrations and cinema shows were arranged whenever possible. Besides the routine sanitation work in these villages to which reference has been made in the reports, from time to time, a special feature of the year has been the distribution of illustrated pamphlets on epidemic diseases in the vernacular languages to school children. The touring medical officers treated 3,584 patients for various ailments and performed 3,504 anti-plague, 1,582 anti-cholera inoculations and 3,863 vaccinations against small-pox in the selected villages. Wells in these villages were particularly attended to, during the year, 942 drinking water wells were disinfected.

These villages practically remained free from epidemic diseases during the year except 4 villages in Raichur and one in Medak district which were affected with plague and cholera respectively. Cholera was rampant at the time in Medak district and plague was prevalent throughout the length and breadth of the Raichur district this year. A few cases of small-pox were reported in a village in Parbhani district but by prompt precautionary measures the disease was controlled in its very initial stages.

27. *Fairs and Festivals*:—During the year 95 major and 468 minor festivals were held in the Dominions. This very large number of fairs and festivals held during the various months of the year put a heavy strain on the meagre health organization in the districts. Constant vigilance has got to be kept on these festival centres where, with the exception of not more than half-a-dozen, the rest have unprotected water supplies. The attention of the District Water Board has been drawn to the necessity of providing protected water-supplies at these places in particular the perennial pilgrimage centres in the dominions where pilgrims keep coming throughout the year. The sanitary arrangements during the festivals

NO	PARTICULARS	Shown	NO OF days	Onward Journey Approximate dates	NO OF days	Return Journey Approximate dates

6	Janardhan Swamy Palkhi		2	23 to 24 June	2	1 August to 2 August
	Total		30	(7 June to 6 July)	20	(21 July to 9 August)

are mostly in the hands of the local Revenue Officers who are supposed to act on the advice of the District Health Officers. Quite a large number of these festivals are held annually without intimation to the Public Health Department although such intimation and permission is essential under Government rules (*Viz.*, RESOLUTION No. 15/3 Medical dated 12th Farwardi 1325 F.) which definitely lay down that the Taluqdars and Tahsildars should notify to the Director of Public Health two full months before the probable date of the occurrence of all fairs and festivals in his jurisdiction on a prescribed form giving necessary details. During the year as many as 116 festivals were held in contravention of these rules. Attention of the Revenue Department was drawn to this irregularity from time to time during the year.

The danger to health arising from uncontrolled sanitation, in places where a large number of pilgrims from various parts of the Dominions gather cannot be too strongly emphasized. In 1349 F. two major Jatras, Kurmurty and Rajanagar in Amerchinta and Wana-parthi Samasthan were responsible for the widespread infection of the disease to which reference has already been made under the heading "*Cholera.*" The water-supply and sanitary arrangements at these two jatras were far from satisfactory. The Yedupalayam Jatra, in Andol Taluq of Medak district was not restricted to "Local assemblages" though advised by the Public Health Department and this was responsible for the widespread cholera infection in the Canal Zone of Nizam-sagar.

28. *Palkies for Pandharpur Jatra*:—The palkies carried to the Ashadi Fair at Pandharpur in the Bombay Presidency during the hot months of Thir and Amerdad were until recent past a constant source of danger to a number of districts in the State through which they were carried by their numerous followers. Attached is a route map of six palkies that pass through the Dominions, their period of stay both on their onward and return journey, the places where they enter and leave the State jurisdiction and the villages where they halt *en route* are indicated. A reference to this map will show that nine inoculating centres were established during the year at key

positions and in addition a Medical Officer with necessary equipment and staff accompanied each palanquin throughout its journey within the Dominions. In all 24,290 inoculations against cholera were performed amongst the pilgrims going for the Fair which covers practically every pilgrim that passes through the Dominions to Pandharpur. This system of indirect compulsory inoculation has been achieved by mere persuasion by the health staff.

One of the palanquins (Shri Rukma Bai) while passing through Parbhani district got infected and 3 cases and 1 death resulted from cholera but it is gratifying to note that infection did not spread because preventive measures were immediately adopted and the whole congregation of pilgrims were well protected against the disease. This demonstrates what could be achieved in the way of cholera control if proper preventive measures are taken in time: this very incident could otherwise have led to a widespread cholera epidemic.

29. Nutrition Department:—Nutrition surveys of the State were started during the year under a trained Nutrition Officer of the rank of a District Health Officer with one Sub-Assistant Surgeon and 4 Health Inspectors under him. A programme of work covering 3 years survey in urban and rural areas has been drawn up. The scheme costs 23,727 rupees annually. The Sub-Assistant Surgeon appointed under the scheme was also deputed to Coonoor for training during the year.

(a) *Hyderabad:*—Diet surveys of 112 families in Hyderabad City were carried out consisting of municipal sweepers and labourers attached to Osmania General Hospital. The main cereal consumed was milled rice and very little substitution of milled rice by millet was done. The practice of washing rice several times before cooking which affects the nutritive value of this particular cereal seems to be a common practice. The vegetable intake was strikingly low. Indebtedness was fairly heavy amongst the class of municipal sweepers. This, together with additional drain due to their alcohol habits was conducive to their low standard of living. Angular stomatitis and glossitis were particularly noticeable amongst the sweeper group due to large intake of milled rice with little addition of millet and vegetables.

Bitots spots and xerophthalmia were distributed throughout though the highest number was recorded again among the sweeper group.

Besides this 3,520 boys were examined for signs of malnutrition in 14 Government Primary and Middle Schools of the City, where the incidence of deficiency diseases was Bitots spots and xerophthalmia 6 per cent. angular stomatitis and glossitis 2 per cent. and dental caries 12 per cent.

(b) *Medak District*:—Dietetic habits of groups of people in different rural areas of Medak district have also been investigated. These comprised of 139 families, in 13 villages of various talukas of the district. Most of these families belonged to small cultivators, tradesmen and agricultural labourers. Particular care was also taken to include backward classes (Dheds) whose economic status is low. Amongst these 13 villages, 6 villages, —Gajwail, Mulug Bollarum, Chilasagar, Annasagar and Wagnoorthy—belonged to Siddipet taluq where the bulk of the diet of the villagers was Indian maize. Surprisingly the cultivation of main cereal in this taluqa happens to be that of Indian maize quite distinct from that of the other taluqas where rice or jawar is the main cereal grown. Cases of pellagra that were noticed amongst all the investigated families were from this taluqa. In two villages, Palwatla and Nagulpally belonging to Jogipet taluqa, old cases of lathyrism were found. At present the main cereal consumption of the inhabitants of these two villages is Italian millet and jawar. Lathyrism first appeared in these villages about 20 years ago when severe famine visited and forced the villagers to consume the then only available food-stuff Khesari dhal. Probably due to the consumption of Khesari dhal, lathyrism made its appearance in about two dozen people, which are lingering till now. No fresh cases have occurred since then and from experience gained, the villagers have taken up to consuming Italian millet and jawar in preference to Khesari dhal.

Along with the rural diet surveys, nutritional surveys of 1,595 boys and 227 girls were carried out, in Primary, Middle and Aided Schools of other villages in the same

district. The main deficiency disease noticed were angular stomatitis, glossitis, Bitots spots, xerophthalmia and dental caries.

Institutional diet surveys of 8 boarding hotels of Wesley Methodist Mission, at three different places, Medak, Ramayampet and Siddipet were carried out and necessary recommendation made.

(c) *Recommendations*:—Rural dietary surveys indicate that the villager devotes most of his attention towards the cultivation of cereals and very little towards the production of pulses. Since Medak is in Telangana the main cereal consumed was rice excepting in Siddipet Taluqa where maize formed the bulk of the cereal food. Partial substitution of rice by millet was rare. A greater substitution of rice by millet would enhance the nutritive value of the diet. “Grow and eat more millet and substitute it for rice” would therefore be a desirable slogan for propaganda work in rice eating areas—Telangana districts, and as an agricultural policy it would be better if more attention is devoted to the cultivation of millet like Jawar and Ragi in preference to rice in the rice eating areas of the Dominions.

Very often difficulties are met with in persuading the people to eat millet since this is regarded as an inferior type of food and secondary in importance to rice. In such cases parboiling of rice could be advocated. During the process of parboiling the vitamin “B”, which is contained in the outer layers, gets diffused through the grain, so that subsequent milling removes this vitamin to a lesser extent than in respect of raw rice. The nutritive value of rice which is affected by milling, washing and cooking is all retained in parboiling. In urban areas and cities, use of home pounded rice should be advocated.

Further it is clear from these rural dietary surveys that the rice eaters’ intake of pulses very often falls short of the required standard. Pulses supply some of the food factors in which rice is deficient and constitute a valuable supplement to rice diet. At present the production of pulses is not unsatisfactory but the consumption is poor. So the problem of ensuring a satisfactory amount of pulse in the rice eaters’ diet will have to be attempted by propaganda.

(d) *Propaganda*:—While carrying on these rural diet surveys magic lantern lectures on “ Food and Nutrition ” were given in 11 villages and at one Mission Institution.

30. *Famine Relief*.—As a result of the failure of rains in 1348 F., famine conditions prevailed during the earlier part of 1349 F. in the taluqs of Asifabad, Sirpur, Laxettipet and Chinnur of Adilabad district and in Sultanabad, Sircilla and Jagtiyal of Karimnagar district. Relief works were opened by Government in these taluqs. In Asifabad district an Assistant Surgeon, a compounder and a Health Sub-Inspector with a peon were specially appointed to look after the famine camps and in Karimnagar districts the work was mainly looked after by the taluq medical officers except during the hot months of the year when a Sub-Assistant Surgeon and 3 Health Sub-Inspectors were appointed to assist the Health Staff of the district in looking after the Health of the workers in the famine stricken areas. The health of labourers in the famine camps remained uniformly good throughout and no epidemic diseases prevailed anywhere.

31. *Anti-Rabic Treatment*.—Anti-rabic treatment which was limited to 5 centres in the Dominion has been extended towards the close of the year to 16 centres—one at each of the 15 district headquarters hospitals and at the Chemical and Bacteriological Laboratory in

Hyderabad. This will bring treatment nearer to the homes of patients. During the year of report 2,066 cases against 1,586 last year received anti-rabic treatment at the various centres as per statement given below:—

	Chemical Laboratory, Hyderabad	Aurangabad	Nizamabad	Gulberga	Warangal	Total for Centres during 1349 F.	As compared with 1348 F.
Number fully treated and discharged	442	22	7	51	20	542	665
Number did not complete the treatment	1,436	5	..	5	8	1,454	903
Number died during treatment	3
Number remaining under treatment at the end of the year	64	2	1	..	3	70	31
Total	1,942	29	8	56	31	2,066	1,602
As compared with 1348 F. ..	1,414	100	13	48	27	1,602	..

In 1349 Fasli the new system of classifying patients into 3 classes instead of the previous 4 classes was followed depending upon the situation and nature of the wound inflicted by the rabid animal. The total cost of vaccine purchased from Coonoor was B.G. 3,470 against B.G. Rs. 5,437 in 1348 Fasli. This reduction is mainly due to the fact that the cost of vaccine has now been reduced by the Pasteur Institute, Coonoor, from B.G. Rs. 6 to 5 per course.

One hundred and twenty-four cases were treated in the district centres against 188 last year, which shows a fair decrease, whereas in the city of Hyderabad the total number of cases treated was 1,942 against 1,414 in 1348 F. showing a considerable increase in the dog-bite cases in the City during the year. The attention of the Municipal Corporation has been drawn in the past to the urgent necessity of taking steps against stray dogs in the City because it is wrong in principle to provide treatment

of cases as they arise without seriously tackling the source of the disease.

32. *Public Health Financial Aspects:—(a) Expenditure.*—The expenditure of the Public Health Department was Rs. 6,57,884-2-6 during 1349 Fasli compared with Rs. 6,26,740-11-10 last year. The main heads of expenses are tabulated in Statement No. 21 P.H. Expenditure per head of population works out at 7.7 pies against 7.5 pies in the year before.

The Council Sub-Committee appointed to consider a note on the financial aspect of Public Health in the State RESOLVED that in view of the fact that Government has accepted the liability of incurring an additional annual expenditure on primary education in rural areas rising from Rs. 7 lakhs to Rs. 13 lakhs during the next 5 years, there was full reason for an additional parallel increase in the expenditure on Public Health and Medical relief in the rural areas. There can be hardly any doubt that the present provision for Public Health purposes is very limited and that no material improvement in the health conditions could be expected unless expenditure on Public Health in rural areas is raised to at least about 2 annas per head of population.

The principle has been accepted that Public Health is purchasable and that within natural limitations any community can determine its own death rate; it is therefore imperative that Government should adopt a more generous policy with regard to expenditure on all measures calculated to improve the health conditions in the State.

During the year a revised Public Health Budget raising the annual expenditure in the district to Rs. 10,29,085 and a non-recurring expenditure of 10 lakhs from Local Fund Pre-Reforms Balances on special Campaigns was recommended to Government.

[Statement.]

(b) *Income*:—The income to Government during the year from various sources as detailed below amounted to Rs. 13,193-6-9 against Rs. 7,764-0-5 in the previous year:—

	Rs.	a.	p.
(i) Sale of vaccine lymph and calves..	7,900	- 2	- 11
(ii) Sale of grass at the Isolation Hospital	88	- 6	- 2
(iii) Sale of anti-plague vaccine to Paighas, etc.	5,118	- 2	- 4
(iv) Miscellaneous	86	- 11	- 4
Total ..	13,193	- 6	- 9

33. *Vaccination against Small-pox*:—The statistics of vaccination are discussed in a general way in the following paragraphs, but for details reference should be made to Statements 9 to 12 P.H.

(a) *Primary Vaccination*:—The total number of primary vaccinations performed during the year were 546,212 against an average of 383,187 annually during the last 5 years. The number of vaccinations performed during the year is the highest on record so far. This was greatly due to the fact that all members of the Health Staff have been asked to vaccinate unprotected children whenever and wherever spotted during their tours, and the Assistant Health Officers have been specially enjoined to detect unprotected children in the villages visited by them and to vaccinate them. This system introduced during the year has resulted in the detection and vaccination of 12,845 unprotected children.

(b) *Revaccinations*:—The number of revaccinations performed were 115,760 against a five year average of 16,508, thus a distinct advance has been made in this direction but still a good deal of effort is necessary and this has been particularly stressed on all members of the Health Staff through circular letters during the year because in vaccination and revaccination we possess a powerful preventive weapon against small-pox. In the proposed draft vaccination Act sent up to Government during the year for sanction, provision for revaccination of individuals every tenth year has been made.

(c) *Success Rate*:—The success rate of primary vaccinations was 96.05 per cent. and of revaccination 72.5 per cent. for details see Statement No. 9 P.H.

The results of only 23 per cent. of total vaccination performed during the year were verified. This low rate of verification was due to the inefficiency of Deputy Inspectors of vaccination who are now being replaced by qualified Health Inspectors. The scheme of appointing two more Health Inspectors (Second Grade) in each district was sanctioned during the year and in three districts, namely, Osmanabad, Gulburga and Mahbubnagar, the Deputy Inspectors of vaccination have been replaced by qualified Health Inspectors. As the present Deputy Inspectors of vaccination retire, they will be replaced by Health Inspectors who have been made responsible for the verification of vaccinations performed by the Vaccinators.

(d) *Number of Vaccinators employed*:—The number of Diwani and Local Fund Vaccinators employed in the districts is 139; in addition there are 53 Health Sub-Inspectors and 22 Health Inspectors in the districts who also perform vaccinations. It should be noted that the Non-Government Illaqs which constitute 42.7 per cent. of the Dominions, employ only 33 Vaccinators which include 7 Vaccinators employed for Sarf-i-Khas areas; this is a meagre provision with the result that extensive Non-Government areas are without vaccinators. The Diwani Vaccinators have performed 64,352 vaccinations in these Illaqs during the year.

(e) *Average number of vaccinations performed*:—The average number of vaccinations performed by each Vaccinator, under the control of the Public Health Department, was 3,515 annually compared with 2,752 last year.

(f) *Cost of Vaccination*:—The cost per vaccination performed during the year was Re. 0-2-11 as last year. The cost of verification per child was Re. 0-2-8. The latter is rather high and is bound to decrease with the advent of the new scheme of replacing inefficient Deputy Inspectors of Vaccination by Health Inspectors.

(g) *Quantity of Lymph Manufactured*:—The Vaccine Depot at Hyderabad continued to supply vaccine

lymph of excellent quality throughout the Dominions during the year. 582,469 doses of glycerinated lymph were manufactured against 488,732 last year. 142 cow and 8 buffaloes calves were vaccinated for the purpose, of which 137 cows and 8 calves gave successful results. The yield of lymph pulp per cow calf was 11.6 drams and for buffalo calf was 16.85 drams; the latter was mainly used for seed lymph purposes.

The total number of doses of vaccine lymph distributed by the Depot to vaccinators during the year of report was 636,610 against 446,899 last year. Statement No. 13 P.H. shows details of distribution of lymph to the various vaccinating agencies during 1349 Fasli.

(h) *Cost of Lymph*:—The average cost of lymph per dose on net expenditure was 2.9 pies. The Depot continued to sell lymph to Non-Government departments; and the total sale proceeds were Rs. 5,940-8-0 during the year. For details please refer Statement No. 14 P.H.

34. *Chemical and Bacteriological Laboratory*:—Statements Nos. 22 P.H. and 23 P.H. show details of work conducted during the year at the Chemical and Bacteriological Laboratories compared with the work done last year. The total number of cases investigated in 1349 Fasli was 7,342 against 7,093 in the previous year.

(a) *Medico-legal Examinations*:—Nature of medico-legal work conducted during the year was as follows (*vide* Statement 24 P.H.) corresponding figures for 1348 F. are also given:—

Sub-sections	1349 FASLI			1348 FASLI		
	Cases	Percent- age of positive cases	Arti- cles	Cases	Percent- age of positive cases	Arti- cles
A. Abortion ..	1	100.0	13	2	..	10
B. Blood Stains ..	210	85.2	1,417	234	98.2	1,474
C. Human Poisoning	337	56.0	753	430	57.9	896
D. Cattle Poisoning	21	66.6	95	19	57.8	68
E. Seminal Stains ..	68	100.0	344	50	50.0	333
Total ..	637	78.0	2,622	735	73.4	2,771

The relative frequency of poisons used and detected in 337 cases of human poisoning investigated is shown in Statement No. 25 P.H. arranged according to nature of poison detected and the district from which the cases were referred. The most commonly used poisons were opium, datura, arsenic, alcohol, copper sulphate and iodine which form 22.7, 11.2, 7.9, 6.9, 5.8 and 4.2 per cent. respectively of the total cases in which poison was found, the remaining 41.3 per cent. include the less commonly used poisons.

Statement No. 26 P.H. gives details of the 14 cases of cattle poisoning examined during the year. Ganer remains the most commonly used cattle poison and was found in 8 cases out of 14.

(b) *General Analysis*:—15 specimens of articles mentioned below were analysed and tested against 34 examined last year.

Article examined.				Number of samples examined.
1.	Lysol	3
2.	Fecta Block	1
3.	Tr. Iodine	2
4.	Samco's Cafiasprine	1
5.	Surma	1
6.	Pot. Permanganate	1
7.	Alumina Sulphate	3
8.	Oil Cakes	2
9.	Vegetable tonic powder	1
Total				15

(c) *Water Analysis*:—During the year under record, 336 specimens of water samples were analysed against 346 last year.

	1349 F.	1348 F.
Chemical examinations ..	164	174
Bacteriological examinations ..	172	172
Total ..	336	346

Statement No. 27 P.H. gives details.

(d) *Food Analysis*:—Chemical analysis of 590 samples were done during the year against 466 samples last year.

(e) *Milk, butter and ghee*:—Of the 15 samples of milk examined one was found to be adulterated. The sample came mainly from hospital supplies. Of 437 samples of butter and ghee 139 were found to be adulterated.

Statement No. 28 P.H. gives further details of the food samples examined during the year of report.

(f) *Work conducted for private persons*:—During the year 434 specimens were examined on payment against 494 last year. A total sum of Rs. 1,530 was realized as income against Rs. 1,950-8-0 last year.

PERSONAL.

I am glad to report for the information of Government that as a whole officers of the department have displayed skill and zeal in their work. Dr. Mirza Hasan Ali Khan has continued to give me his loyal and capable assistance. Dr. M. Farooq, Deputy Director of Public Health Department has worked untiringly and his tact in dealing with Revenue authorities has induced steady progress in rural sanitation. The long experience of the department and loyal support of my Personal Assistant Mr. Syed Lutf Ahmed have helped me very much. Among the District Civil Surgeons Dr. L. D. Khatri at Raichur, Dr. S. A. Razvi at Parbhani, Dr. Daver at Nanded, Dr. Iftikharuddin at Mahboobnagar, Dr. Feeroze Hussain at Bidar, Dr. Mohd. Yaseen at Warangal have rendered constant and valuable work.

The following Health Officers showed interest in the Public Health work Dr. V. V. Garde at Gulbarga, Dr. P. Ramchander at Osmanabad, Dr. Ahmed Hasan Khan at Asifabad, Dr. Iftikharuddin at Mahboobnagar, Dr. Riaz Ali at Nizamabad, Dr. S. A. Razvi at Parbhani, Dr. Daver at Nanded and Dr. Khaja Hameeduddin at Karimnagar.

I have pleasure in mentioning Dr. Khursheed Hussain the 1st Surgeon, Dr. Bahadur Khan the 2nd Surgeon, Dr. Munawar Ali the 3rd Surgeon, Dr. Bankat Chander the 2nd Physician, Dr. V. G. Borgaonkar the Gynecologist for good work done at the Osmania Hospital.

Dr. D. S. R. Naidu the 1st Resident Medical Officer of the Osmania Hospital had given invaluable help in the administration of the hospital.

Dr. C. L. Ahluwalia the Special Plague Officer and Dr. Abdul Basith Saberi the Chief Malaria Officer have carried out their work with enthusiasm and efficiency.

Dr. M. M. Siddiq Hussain worked satisfactorily as Chemical Examiner and Bacteriologist.

Dr. C. R. Naidu the Nutrition Officer is displaying great energy and interest in the dietetic problems.

Among the Assistant Surgeons Dr. Riyasat Ali Khan in the Unclaimed Children Protection Scheme, Dr. Malik at Jalna, Dr. V. M. Joshi at Latur, Dr. Joseph Israel at

Sultan Bazaar Hospital, Dr. S. Boomannah at Chemical Laboratory and Dr. S. Raghvender Rao at Plague Office have worked creditably.

The Assistant Health Officers who have worked zealously are Dr. M. H. Deshpande, Dr. A. C. Abraham, Dr. C. Damodaram Naidu, Dr. A. B. S. Mudaliar, Dr. Abdus Samad, Dr. Yadgirkar, Dr. M. Rudrappa.

Among the Sub-Assistant Surgeons I mention Dr. U. R. Pargaonkar at Chemical Laboratory, Dr. S. R. K. Reddy at T. B. Clinic, Dr. Anwar Hussain at X-Ray Department Osmania Hospital.

(Sd.) HYDER ALI KHAN,

F.R.C.S. (EDIN.)

*Director Medical and Public Health
Department.*

Public Health Statements

- 1 P.H. Statement showing the number of plague cases and deaths in H.E.H. the Nizam's Dominions during the year 1349 Fasli.
- 2 P.H. Statement showing the number of plague inoculations performed in H.E.H. the Nizam's Dominions during the year 1349 Fasli excluding the British Administered Areas.
- 3 P.H. Statement showing the number of deaths from plague registered every month in H.E.H. the Nizam's Dominions for the decennium ending 1349 Fasli.
- 4 P.H. Statement showing the number of cholera cases and deaths in H.E.H. the Nizam's Dominions during the year 1349 Fasli.
- 5 P.H. Statement showing the number of cholera inoculations performed in H.E.H. the Nizam's Dominions during the year 1349 Fasli excluding the British Administered Areas.
- 6 P.H. Statement showing the number of deaths from cholera registered every month in H.E.H. the Nizam's Dominions for the decennium ending 1349 Fasli.
- 7 P.H. Statement showing the number of small-pox cases and deaths in H.E.H. the Nizam's Dominions during the year 1349 Fasli.
- 8 P.H. Statement showing the number of deaths from small-pox registered every month in H.E.H. the Nizam's Dominions for the decennium ending 1349 Fasli.
- 9 P.H. Statement showing particulars of vaccination done by Vaccinators, and other agencies in H.E.H. the Nizam's Dominions for the year 1349 Fasli.
- 10 P.H. Statement showing particulars of vaccination verified by Inspecting Officers in H.E.H. the Nizam's Dominions for the year 1349 Fasli.
- 11 P.H. Statement showing the cost of vaccination (excluding the Vaccine Depot) in H.E.H. the Nizam's Dominions for the year 1349 Fasli.
- 12 P.H. Statement showing the total number of persons primarily vaccinated with the number of those persons who were successfully vaccinated in H.E.H. the Nizam's Dominions for the last ten years ending 1349 Fasli.
- 13 P.H. Statement showing distribution of cow lymph during the year 1349 Fasli.
- 14 P.H. Statement showing sale proceeds of lymph supplied to private institutions during the year 1349 Fasli.
- 15 P.H. Statement showing births and deaths registered in the districts of H.E.H. the Nizam's Dominions excluding the British Administered Areas during the year 1349 Fasli.

- 16 P.H. Statement showing births registered in H.E.H. the Nizam's Dominions excluding the British Administered Areas during the year 1349 Fasli.
 - 17 P.H. Statement showing number of deaths registered from different causes in H.E.H. the Nizam's Dominions excluding the British Administered Areas during the year 1349 Fasli.
 - 18 P.H. Statement showing the census population, estimated mid-year population, area and density of population, and the age distribution of population in H.E.H. the Nizam's Dominions as per last census of 1931 (1341 Fasli).
 - 19 P.H. Statement showing details of work done by Assistant Health Officers in charge of Travelling Dispensaries in H.E.H. the Nizam's Dominions for the year 1349 Fasli.
 - 20 P.H. Statement showing details of work done by City and District Health Inspectors during the year 1349 F.
 - 21 P.H. Statement showing income and expenditure of H.E.H. the Nizam's Public Health Department under the various budget heads during the year 1349 Fasli.
 - 22 P.H. Statement showing nature of work conducted during 1349 Fasli compared with the previous year.
 - 23 P.H. Statement showing districts from where articles were received for examination during 1349 Fasli arranged according to sections concerned.
 - 24 P.H. Detailed statement under medico-legal section showing districts from where cases were received for investigation during 1349 Fasli arranged according to nature of crime.
 - 25 P.H. Statement showing the relative frequency of poisons used and found in 337 positive cases of human poisoning during 1349 Fasli, arranged according to the nature of poison detected for each district.
 - 26 P.H. Statement showing the relative frequency of poisons used and found in 14 positive cases of cattle poisoning during 1349 Fasli arranged according to the nature of poison detected for each district.
 - 27 P.H. Statement showing abstract of water analyses conducted during 1349 Fasli with details of the source of water and their results.
 - 28 P.H. Statement showing results of analyses of food samples tested during 1349 Fasli.
 - 29 P.H. Statement showing cases and deaths registered from plague, cholera and small-pox by taluqs with death rates per thousand of population during 1349 Fasli in H.E.H. the Nizam's Dominions.
